I.	I. Course Identification and General Information:							
1.	Course Title:	BIOLOGY						
2.	Course Code &Number:	FMS114						
		С.Н				тотлі		
3.	3. Credit hours:		Tut.	S.	P.	Tr.	TOTAL	
3.	Cieuit nouis.	2	-	-	1	-	3	
4.	Study level/ semester at which this course is offered:	(first) Year – (1st) semester						
5.	Pre -requisite (if any):	None						
6.	Co -requisite (if any):	None						
7.	Program (s) in which the course is offered:	s All programs of Faculty of medical sciences						
8.	Language of teaching the course:	ENGLISH						
9.	Location of teaching the course:	At the University facility						
10.	Prepared by							
11.	Date of Approval							

L: lecturing; Tut: Tutorial, S: seminar; P: practical; Tr.: training

II. Course Description:

The course provides the student with basic knowledge of life structures and the differences between living organisms and non-living organisms, classification of living organisms, chemical context of life, basic processes in living organisms, cell structure and function and life cycle. The course also provides the student the skills to operate light microscopy and handling Microscopical samples which the student will use in specific pharmacy courses such as physical pharmacy and Pharmacognosy,

يزود المقرر الطالب بالمعرفة الأساسية لهياكل الحياة والاختلافات بين الكائنات الحية والكائنات عير الحية، وتصنيف

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom. The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector. A

Active Lecture -discussion: a short Active Lecture/ address followed by discussion

Laboratory practice: students doing experiments in labs individually or in small groups.

Feed-back learning: students are individually asked to do certain assignments such as summarizing, internet search, make charts or solve mathematical problems related to the courses topics. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:								
No	Assignments	Aligned CILOs(symbols)	Week Due	Mark					
1	Individual: every student is assigned to do a search report of an enzyme/ chemical constituent in the cell	d2	4-13	3					
2	Group : each group of students will be assigned to do a search-report about genetic elements	d1, d3	14	2

IX	X.Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the Active Lecture will not be allowed to attend the Active Lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

II. Course Description:

The course provides the student basic knowledge of chemistry of matters including chemical structure theories periodic table of elements, chemical bonds, electronegativity, polarity, acidity, basicity, ionization constant, Quantum in chemistry, types of Chemical reactions and equilibrium. The practical part of the course is designed to provide the student practical skills of how to safely and effectively perform tests of chemical reactions and identification. Such knowledge and skills will help the student in performing such practice while studying more specific related courses e.g. pharmaceutical analytical chemistry, pharmaceutical organic chemistry and medicinal chemistry.

يزود المقرر الطالب بالمعرفة الأساسية في الكيمياء بما في ذلك نظريات التركيب الكيميائي في المادة والجدول الدوري للعناصر، والروابط الكيميائية، والصفات الكيميائية للمادة مثل السالبة الكهربية، والقطبية، والحموضة، والقاعدة، وثابت التأين، والكم، وأنواع التفاعلات الكيميائية توازنها، كما تم تصميم الجزء العملي من المقرر لتزويد الطالب بالمهارات العملية حول كيفية إجراء اختبارات التفاعلات الكيميائية وتحديد الهوية بأمان وفعالية. ستكسب هذه المعرفة والمهارات الطالب القدرة على أداء مثيلاتها أثناء دراسة مقررات أكثر صلة بالتخصيص ذات على سبيل المثال الكيمياء التحليلية الصيدلانية والكيمياء العضوية الصيدلانية والكيمياء الدوائية.

VI. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classrd3m.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do certain assignments such as summarizing, internet search, make charts or solve mathematical problems related to the courses topics. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical mad2er &for promoting team work skills

VII	VII. Assignments:

VII. Teaching strategies of the course:

Active lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VIII	I. Assignments:

II. Course Description:

The course concerns with providing basic knowledge in Physics including kinematics and Newtonian's laws, work and energy, pressure, electricity, Optical and Sonic physics. The course will link between these basics and their applications in the medical fields. The course will also introduce the students to physics laboratory where they will operate simple physical instruments to measure different physical parameters. The course is also an introduction to specific pharmacy courses including "physical pharmacy" and "pharmaceutics" disciplines.

يهتم المقرر الدراسي بتوفير المعرفة الأساسية في الفيزياء بما في ذلك علم الحركة وقوانين نيوتن، والعمل والطاقة، والضغط، والكهرباء، والفيزياء الضوئية والصوتية، وسيربط بين هذه الأسس العلمية وبين تطبيقاتها في المجالات الطبية. سيتعرف الطلاب أيضا في هذا المقرر على معمل الفيزياء حيث سيعملون على تشغيل أجهزة فيزيائية بسيطة والقيام بقياس بعض من الظواهر الفيزيائية المختلفة. يمثل المقرر أيضًا مدخلا لمقررات تخصصية في الصيدلة مثل "الصيدلة الفيزيائية" و "الصيدلانيات."

VIII. Teaching strategies of the course:

Active Lecture: It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

	IX. Assignments:								
N	No	Assignments	Aligned CILOs	Week Due	Mark				
	1	Individual: every student is assigned to solve physical problems related to course topics.	b2, d2	4-13	3				
	2	Group: each group of students will be assigned to do a search-based report on one of the physical phenomena in the course topics.	b2, d1, d3	14	2

II. Course Description:

The course concerns with providing basic knowledge in Physics including kinematics and Newtonian's laws, work and energy, pressure, electricity, Optical and Sonic physics. The course will link between these basics and their applications in the medical fields. The course will also introduce the students to physics laboratory where they will operate simple physical instruments to measure different physical parameters. The course is also an introduction to specific pharmacy courses including "physical pharmacy" and "pharmaceutics" disciplines.

يهتم المقرر الدراسي بتوفير المعرفة الأساسية في الفيزياء بما في ذلك علم الحركة وقوانين نيوتن، والعمل والطاقة، والضغط، والكهرباء، والفيزياء الضيئة والصوئية والصوتية، وسيربط بين هذه الأسس العلمية وبين تطبيقاتها في المجالات الطبية. سيتعرف الطلاب أيضا في هذا المقرر على معمل الفيزياء حيث سيعملون على تشغيل أجهزة فيزيائية بسيطة والقيام بقياس بعض من الظواهر الفيزيائية المقرر على معمل المقررات تخصصية في الصيدلة مثل "الصيدلة الفيزيائية" و "الصيدلانيات."

II. Course Description:

The focus of this course is on medical and clinical terminology broadly relating to human anatomy and physiology and the basic body systems with added emphasis placed on those terms pertaining to diagnosis and pathology. The bases of medical terms will be examined – such as prefixes, suffixes, roots, combined forms. Pertinent acronyms and abbreviations will also be included يركز هذا المقرر الدراسي على المصطلحات الطبية والسريرية المتعلقة على نطاق واسع بعلم التسريح و علم وظائف الأعضاء وأنظمة الجسم الأساسية مع التركيز أيضا على المصطلحات المتعلقة بالتشخيص و علم الأمراض المرضية سيتناول المقرر أسس المصطلحات الطبية - مثل البادئات واللواحق والجذور والأشكال المركبة كما سيتم تضمين المختصرات والاختصارات ذات الصلة

II. Course Description:

The course provides the student with basic knowledge about how to provide first aid to people with wounds and burns or who suffer from serious life-threatening conditions such as asphyxia, heart attack, seizures, coma, and others. The course is important to make the student able to act in those events that may occur accidentally while conducting tests in laboratories.

يوفر المقرر للطالب المعرفة الأساسية حول كيفية تقديم الإسعافات الأولية للأشخاص المصابين بالجروح والحروق أو الذين يعانون من ظروف خطيرة تهدد الحياة مثل الاختناق والسكتة القلبية والنوبة العضلية والغيبوبة وغيرها. المقرر هام لتمكين الطالب قادرا على التصرف في حال وقوع تلك الحوادث أثناء اجراء الاختبارات في المعامل.

9.	Location of teaching the course:	IN THE	UNIVERSIT	ГҮ				
10	Prepared by							
11	Date of Approval							

II. Course Description:

The course provides the student with basic knowledge about how to provide first aid to people with wounds and burns or who suffer from serious life-threatening conditions such as asphyxia, heart attack, seizures, coma, and others. The course is important to make the student able to act in those events that may occur accidentally while conducting tests in laboratories.

يوفر المقرر للطالب المعرفة الأساسية حول كيفية تقديم الإسعافات الأولية للأشخاص المصابين بالجروح والحروق أو الذين يعانون من ظروف خطيرة تهدد الحياة مثل الاختناق والسكتة القلبية والنوبة العضلية والغيبوبة وغيرها. المقرر هام لتمكين الطالب قادرا على التصرف في حال وقوع تلك الحوادث أثناء اجراء الاختبارات في المعامل.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

1. A	Alignment CILOs to PILOs			
PILO	S	CILOs		
Knowle	dge & understanding: Upon successful complete	ion of the course, students will be able to:		
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body.	 a1. Define first aid and its objectives and significance. a2. Discuss the principles of first aid in various emergency situations a3. Identify the steps to be carried out in first aid of different types of accidents and injuries. 		
A10	Describe the pharmacists role in different pharmacy practices.	a4. Describe his/her role as a pharmacist to implement and participate in primary health care and epidemic-diseases control programs and in assisting health care team to provide first aid services.		
Intellect	ual skills: Upon successful completion of the co	urse, students will be able to:		
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret signs of mild and sever accidents and injuries.		
Professi	onal & practical skills: Upon successful comple	etion of the course, students will be able to:		
C7	Conduct research and utilize the results in different pharmaceutical fields.	c1. Search efficiently for information using documented and electronic sources of information.		
		c2. Present and report his/her works correctly using appropriate writing rules and technologies media.		
Transfe	rable skills: Upon successful completion of the	course, students will be able to:		
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d1. Demonstrate the skills of time management and self-learning.		
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d2. Participate efficiently with his colleagues in a team work.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark			
2	Group : each group of students will be assigned to provide a search-based report for comparison of first-aid procedures of cases not included in the theoretical part of the course.	c1, c2, d1, d2	14	10			

VII. Schedule of Assessment Tasks for Students During the Semester

III. Course Description:

The course of "Mathematics" is designed to provide the student with basic mathematical knowledge and skills including rectangular Co-ordinates, curve fitting using first-degree equation in both variables, determination of slope and intercept and point of intersection, equation of first degree in both x and y, exponential and logarithmic curves, graphical solution of equation, graphical solution of simultaneous equations, arithmetic progression, geometric progression, permutation-combination, binomial theorem, exponential theorem. These knowledge and skills will help the student to solve mathematical problems encountered in during pharmaceutical, analytical and pharmacokinetics. The course is co-requested with "Pharmaceutical calculations" course as both concern with skills of solving mathematical problems and skills.

تم تصميم مقرر "الرياضيات" لتزويد الطالب بالمعرفة والمهارات الرياضية الأساسية بما في ذلك الإحداثيات المستطيلة، وتركيب المنحنى باستخدام معادلة الدرجة الأولى في كلا المتغيرين، وتحديد المنحدر والتقاطع ونقطة التقاطع، والمنحنيات الأسية واللوغاريتمية، الحل الرسومي للمعادلات. ستساعد هذه المعرفة والمهارات الطالب على حل المسائل الرياضية التي تستخدم لحساب حركية الدواء والقيام بالحسابات التحليلية والصيدلانية. يتم أخذ هذا المقرر بالتزامن مع مقرر " الحسابات الصيدلانية" حيث يهتم كلاهما بمهارات حل المسائل المعادلات الرياضية.

V. Teaching strategies of the course:

Active lecture - Discussion: a short lecture/ address followed by discussion

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

V	l. Assignments:			
No	Assignments	Aligned CILOs	Week Due	Mark
1	Individual: every student is assigned to solve mathematical problems during Tutorial at the class.	a1, c1, d2	4-13	6
2	Group: each group of students will be assigned to solve mathematical problems during as homework	a1, c1, d1	14	4

	VII. Schedule of Assessment Tasks for Students During the Semester						
No.	Assessment Method		Week Due	Mark	Proportion of Total course Assessment	Aligned Course Learning Outcomes (CILOs)	
	Term	Quizzes	4-13, 14	10	10	c1,	
2	Works	Assignments	7, 12	10	10	a1, c1, d1, d2	
3	Mid-semester exam (written exam)		7	20	20	a1, b1, c1	
4	Final exam (written exam)		16	60	60	a1, c1	
			TOTAL	100	100 %

IV. Course Description:

The course provides the student with basic knowledge and skills of pharmaceutical calculations including: how to express and convert numerals (Arabic and Roman), measurement of weight and volume systems (American, British and French) and interconversion between these systems, how to interpret and quantify compounded prescriptions. The knowledge and skills are significant during medication's formulation, dispensing, dosing and others missions of pharmacy practice.

X. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI. Course Description:

The course provides the student with knowledge in basic psychology concepts in particular the human personality in terms of their types, affecting factors, methods of assessment and communication. Also, the course concerns with medical psychology including psychological health and states of fear, anxiety and depression associated with human diseases, this knowledge will the help the pharmacist to deal effectively with patients and with colleague healthcare professionals.

يزود المقرر الطالب بالمعرفة في مفاهيم علم النفس الأساسية وخاصة الشخصية البشرية من حيث أنواعها، والعوامل المؤثرة عليها، وطرق تقييمها والتواصل معها. أيضًا ، يهتم المقرر بعلم النفس الطبي بما في ذلك الصحة النفسية وحالات الخوف والقلق والاكتئاب المرتبطة بالأمراض البشرية ، وستساعد هذه المعرفة الصيدلي على التعامل بفعالية مع المرضى ومع زملائه المتخصصين في الرعاية الصحية.

XI. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XIII	XIII. Assignments:						
No	Assignments	Aligned CILOs	Week Due	Mark			
1	Individual: every student is assigned to do a search-based report on one of the subtopics studies such as: psychology schools and concepts.	a1, b1, b2, b3, c1	4-13	6			
2	Group: each group of students will be assigned to do a search report on how to deal with one of the following: • Mentally disables • Nervous personalities • Depressed patients • Self-proud persons	c1, d1, d2, d3	14	4

II. Course Description:

The course introduces the student to the main anatomical structure and main functions of the human body systems including skeletal, muscular, nervous, circulatory, respiratory and others. The practical part provides the student the skill to identify the morphological models of different human body systems.

يزود المقرر الدراسي الطالب بالمعرفة في البنية التشريحية الرئيسية والوظائف الأساسية للأجهزة المكونة لجسم الإنسان الجهاز الهيكلي والعضلي والعصبي والجهاز الدوري والجهاز التنفسي وغيرها. يوفر الجزء العملي للطالب مهارة التعرف على النماذج الشكلية لأنظمة الجسم المختلفة.

III. Intended learning outcomes of the course(CILOs) and their alignment to Program Intended learning outcomes (PILOs) and teaching and assessment strategies

asse	essment strategies	
1. Alig	gnment to PILOs	
PIL	Os	CILOS
Know	ledge & understanding : Upon successful	completion of the course, students will be able to:
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body	a1. Show understanding of the basic concepts of anatomy and organization of human body.a2. Describe the types of systems in human body
Intelle	ectual skills: Upon successful completion	of the course, students will be able to:
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	 b1. Classify human body into systems and organs b2. Differentiate between different organs in human body b3. Relate anatomical/histological structure with functions of organs and tissues in human body
Profes	ssional & practical skills : Upon successfu	l completion of the course, students will be able to:
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely different biological samples and chemicals in the laboratory
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate successfully the light microscope and other instruments used in the laboratory.
Trans	ferable skills: Upon successful completion	of the course, students will be able to:
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in teamactivities.	d1. Communicate effectively and behave in discipline with colleagues and teachers.
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d2. Demonstrate time management and self-learning skills.
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d3. Work successfully in team-work in the biology lab
2. Alig	gnment to teaching and assessment strate	gies

II. Course Description:

The course provides the student basic knowledge of the types, sources, biological regulation, chemical structure, biosynthesis, metabolic pathways and the functions of the biological macromolecules, including carbohydrates, lipids, proteins, and their correlation to human diseases due to either their increase or deficiency in the human body. The practical part of the course provides the student with skills to identify those biomolecules in vitro and to bioassay them in biological samples.

بزود المقرر الدراسي الطالب بالمعرفة الأساسية لأنواع ومصادر والتنظيم البيولوجي والأشكال الكيميائية والتخليق الحيوي والمسارات الاستقلابية والوظائف الحيوية للجزيئات البيولوجية كبيرة الحجم (السكريات والدهون والبروتينات) وارتباطها بالأمراض البشرية إما بسبب زيادتها أو نقصها في جسم الإنسان. يزود الجزء العملي من المقرر الطالب بالمهارات اللازمة للكشف عن تلك المركبات في المختبر و كذلك قياسها في العينات الحيوية.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teaching strategies and assessment strategies						
1. Alignment CILOs to PILOs						
PILO	S	CILOs				
Knowle	Knowledge & understanding: Upon successful completion of the course, students will be able to:					
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body.	 a1. Identify the roles of biochemical compounds in human body. a2. Explicit the physiological/pathological involvement of carbohydrates, lipids, proteins. 				
A3	Explain physicochemical properties of materials and products	carbohydrates, proteins and lipids				
Intellect	Intellectual skills: Upon successful completion of the course, students will be able to:					
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret body diseases resulted from disturbances in levels of carbohydrate, proteins and lipids.b2. Predict the outcomes of biochemical				
		reactions involving carbohydrate, proteins and lipids				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b3 . Classify carbohydrates, proteins, and lipids.				
B4	Select appropriate standard operation procedures to conduct qualitative and quantitative analysis.	<u> </u>				
		carbohydrates, proteins and lipids.				
Professi	onal & practical skills : Upon successful cor	npletion of the course, students will be able to:				
C1	C1. Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory				
C2	C2. Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory.				
С3	c3. Screen for drugs from different sources and carry out pharmacy relevant	c3 .Bioassay proteins, carbohydrates and lipids in blood

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI. Assignments:							
No	Assignments	Aligned CILOs	Week Due				
1	Individual: the teacher provide the students with biochemical problems related to the studied topics. Every student is assigned to solve some of those problems individually.	d2, c4, c5	4-13				
2	Group: each group of students will be assigned to present a search report on one pathological condition related to disturbances in biochemical levels in the body.	d1, d2, d3, c4, c5	14

VIII. Learning Resources:

- 1- Required Textbook(s) (maximum two).
 - 1. Kevin Ahern. Biochemistry free for all. 2018, Oregon State University
- 2- Essential References.
 - 1. Pamela C. Champe, Lippincott's illustrated review in Biochemistry, 2010, Lippincott William & Wilkins
 - 3- Electronic Materials and Web Sites etc.
- 1- https://uh.edu/sibs/faculty/glegge/lectures.htm
- 2- https://biochem.oregonstate.edu/node/392

	X. Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

9.	Location of teaching the course:	At the	university f	acility			
10	Prepared by						
11	Date of Approval						

II. Course Description:

The course provides the student basic knowledge of the types, sources, biological regulation, chemical structure, biosynthesis, metabolic pathways and the functions of the biological macromolecules, including carbohydrates, lipids, proteins, and their correlation to human diseases due to either their increase or deficiency in the human body. The practical part of the course provides the student with skills to identify those biomolecules in vitro and to bioassay them in biological samples.

بزود المقرر الدراسي الطالب بالمعرُفة الأساسية لأنواع ومصادر والتنظيم البيولوجي والأشكال الكيميائية والتخليق الحيوي والمسارات الاستقلابية والوظائف الحيوية للجزيئات البيولوجية كبيرة الحجم (السكريات والدهون والبروتينات) وارتباطها بالأمراض البشرية إما بسبب زيادتها أو نقصها في جسم الإنسان. يزود الجزء العملي من المقرر الطالب بالمهارات اللازمة للكشف عن تلك المركبات في المختبر و كذلك قياسها في العينات الحيوية.

IX. Course Description:

The course provides the students with basic knowledge of authority foundations that regulate healthcare professions in Yemen, region and the world. The course also focuses on healthcare regulations, acts and code of ethics. The main purpose of this course is to make the student able to demonstrate and practice his/her responsibilities as medical healthcare specialists ethically and legally and to respect the rights of patients, colleagues and healthcare professionals.

يزود المقرر الدراسي الطلاب بالمعرفة عن السلطات التي تنظم مهن الرعاية الصحية في اليمن والمنطقة والعالم. ويركز المقرر أيضًا على لوائح وأعمال وقواعد السلوك في مجال الرعاية الصحية. الغرض الرئيسي من هذا المقرر هو جعل الطالب قادرًا على أهمية ممارسة عمله كأخصائي في الرعاية الصحية الطبية بطريقة أخلاقية وقانونية واحترام حقوق المرضى والزملاء المتخصصين في الرعاية الصحية

XII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

XIV. Assignments:							
No	Assignments	Aligned CILOs	Week Due				
1	Individual: every student is assigned to provide a survey/observational/ and/or web-search based report on one illegal or non-ethical issue related to pharmacy practice in Yemen	b1, c1, d1, d2	12

XI. Course Description:

The course provides the student with basic knowledge of analysis of substances, including types of qualitative and quantitative analysis, preparation of analytical samples, types of analytical techniques, validation of analysis, and how to avoid the source of errors in analysis. The course also focuses on the concepts and theoretical underpinnings of two types of analysis: titrimetric analysis and electrochemical analysis. The practical part provides the student with the skill of dealing with chemicals, operating analytical instruments, and performing analytical experiments in a chemistry lab. This course is taken in conjunction with another course (Pharmaceutical Organic Chemistry I) to make the student link the concept of analysis and the chemical nature of compounds.

يزود المقرر الطالب بالمعرفة الأساسية لتحليل المواد ويشمل ذلك أنواع التحليل النوعي والكمي وكيفية إعداد العينات التحليلية، وأنواع التقنيات التحليلية، واجراءات التحقق من صحة التحليل، وكيفية تجنب مصدر الأخطاء. كما يركز المقرر الدراسي أيضًا على المفاهيم والأسس النظرية لنوعين من التحليل: التحليل بالمعايرة والتحليل الكهروكيميائي. ويوفر الجزء العملي للطالب مهارة التعامل مع المواد الكيميائية وتشغيل الأجهزة التحليلية وإجراء اختبارات التحليل في معمل الكيمياء. يؤخذ هذا المقرر بالتزامن مع مقرر اخر (الكيمياء المعضوية الصيدلانية 1) لجعل الطالب يربط بين مفهوم التحليل والطبيعة الكيميائية للمركبات.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

assessment strategies					
1. Alignment CILOs to PILOs					
PILOs		CILOs			
Knowle	Knowledge & understanding: Upon successful completion of the course, students will be able to:				
A3	Explain physicochemical properties of materials and products	a1 . Explain the physicochemical properties of substances that can be utilized for their qualitative and quantitative analysis			
A4	Describe analytical methods, principles, design and development techniques	a2 . Describe the principles of titrimetric and electrochemical analysis.			
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist to perform accurate and precise quantitative and qualitative analysis.			
Intellectual skills: Upon successful completion of the course, students will be able to:					
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret data obtained by titrimetric and electrochemical analysis.			
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b2. Design a suitable titrimetric and electrochemical analysis. based on the substance physicochemical properties.			
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b3. Select appropriate standard operating procedure for titrimetric and electrochemical analysis.			
В9	Apply mathematical equations to calculate data relevant to pharmacy practices.	b4. Calculate the content % of a material in a sample using titrimetric and electrochemical analysis.

Professional & practical skills: Upon successful completion of the course, students will be able to:					
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory			
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory			
C7	Conduct research and utilize the results in different pharmaceutical fields.	c3 .Search efficiently for information using documented and electronic sources of information.			
		c4. Present and report his/her works correctly using appropriate writing rules and technologies media.			
Intellectual skills: Upon successful completion of the course, students will be able to:					
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in team-activities.	d1. Communicate effectively and behave in discipline with colleagues.			
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d2. Demonstrate the skills of time management and self-learning.			
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d3. Participate efficiently with his colleagues in a team work.			

2. Alignment CILOs to teaching strategies and assessment strategies

(a) Alignment Course Intended Learning Outcomes (CILOs) of knowledge& understanding to Teaching Strategies and Assessment Strategies

Course Intended Learning Outcomes	Teaching strategies	Assessment Strategies

XIII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

X	XV. Assignments:					
No	Assignments	Aligned CILOs	Week Due	Mark		
1	Individual: the teacher provides the students with problems related to the studied topics. Every student is assigned to solve some of those problems individually.	c3, c4, d1, d2	4-13	3		
2	Group: each group of students will be assigned to do a search report on pharmaceutical applications of one method of the studied titrimetric analysis.	c3, c4, d1, d2, d3	14	2

1.	1. Course Title: PHARMACEUTICAL ANALYTICAL CHEMISTE			/IISTRY I	
2.	Course Code &Number:	PHR214			
		C.H			TOTAL
3.	3. Credit hours:	L.	P.	Tr.	TOTAL
	create nours.	2	1	-	3
4.	Study level/ semester at which this course is offered:	(SECOND) Year — (1 ST) semester			
5.	Pre –requisite (if any):	PHR126 (Pharmaceutical calculations)			
6.	Co –requisite (if any):	None			
7.	Program (s) in which the course is offered:	Pharmacy Bachelor			
8.	Language of teaching the course:	ENGLISH			
9.	Location of teaching the course:	At the university facility			
10	Prepared by				
11	Date of Approval				_

II. Course Description:

The course provides the student with basic knowledge of analysis of substances, including types of qualitative and quantitative analysis, preparation of analytical samples, types of analytical techniques, validation of analysis, and how to avoid the source of errors in analysis. The course also focuses on the concepts and theoretical underpinnings of two types of analysis: titrimetric analysis and electrochemical analysis. The practical part provides the student with the skill of dealing with chemicals, operating analytical instruments, and performing analytical experiments in a chemistry lab. This course is taken in conjunction with another course (Pharmaceutical Organic Chemistry I) to make the student link the concept of analysis and the chemical nature of compounds.

يزود المقرر الطالب بالمعرفة الأساسية لتحليل المواد ويشمل ذلك أنواع التحليل النوعي والكمي وكيفية إعداد العينات التحليلية، وأنواع التقنيات التحليلية، واجراءات التحقق من صحة التحليل، وكيفية تجنب مصدر الأخطاء. كما يركز المقرر الدراسي أيضًا على المفاهيم والأسس النظرية لنوعين من التحليل: التحليل بالمعايرة والتحليل الكهروكيميائي. ويوفر الجزء العملي للطالب مهارة التعامل مع المواد الكيميائية وتشغيل الأجهزة التحليلية وإجراء اختبارات التحليل في معمل الكيمياء. يؤخذ هذا المقرر بالتزامن مع مقرر اخر (الكيمياء العضوية الصيدلانية 1) لجعل الطالب يربط بين مفهوم التحليل والطبيعة الكيميائية للمركبات.

V. Course Description:

The course is an introduction to specialized pharmacy courses (Medicinal chemistry), as it provides the student with basic knowledge of carbon chemistry from which all organic compounds, including drugs, are derived. The course focuses on uncomplicated organic compounds in terms of their functional chemical groups, chemical composition, physical and chemical properties and their interactions. And methods of preparation and common examples of them, and these compounds include: hydrocarbons. haloalkanes, alcohols, ethers. The practical part also provides the student with the skills necessary to deal with these compounds and perform tests to identify their reactions in the chemistry lab.

يعتبر المقرر مدخلا أساسيا لمقررات صيدلانية متخصصة هي (الكيمياء الدوائية) حيث يوفر للطالب المعرفة الأساسية لكيمياء الكربون التي منها يتم اشتقاق جميع المركبات العضوية بما فيها الأدوية ويركز المقرر على المركبات العضوية غير المعقدة من حيث مجموعاتها الكيميائية الوظيفية وتركيبها الكيميائي وخصائصها الفيزيائية والكيميائية وتفاعلاتها وطرق تحضيرها والأمثلة الشائعة لها، وتشمل تلك المركبات: الهيدروكربونات. هالوألكانات، الكحولات والإيثرات كما يوفر الجزء العملي للطالب المهارات اللازمة للتعامل مع هذه المركبات وإجراء اختبارات التعرف عليها و تفاعلاتها في معمل الكيمياء

III	III. Intended learning outcomes of the course: (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies 3. Alignment of CILOs to PILOs						
PILO		Intended learning outcomes of the course (CILOs)					
Know	edge & understanding: Upon successful c	completion of the course, students will be able to:					
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body.	a1. Explain the significance of organic chemistry in modern sciences.					
A3	Explain physicochemical properties of materials and products	a2. Discuss the properties of Carbon atom, models of structural formula, specific properties, mechanisms of reactions and synthesis of uncomplicated organic compounds.					
Intelle	ctual skills: Upon successful completion o	f the course, students will be able to:					
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Differentiate, name and draw the chemical structure of organic compounds.					
		b2. Relate functional group in organic compounds to the physical and chemical properties of the compounds.					
		b3. Predict the catalysts required and the outcomes of a reaction between an organic compound and other chemicals.					
В3	Design an evaluate different types of safe and effective drugs, pharmaceutical dosage forms and cosmetic preparations	b4. Design a sequence to synthesize an organic compound from a parent compound.					
Profes	sional & practical skills: Upon successfu	l completion of the course, students will be able to:					
C 1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory					
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory

XIV. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do certain assignments such as sud1arizing, internet search, make charts or solve mathematical problems related to the courses topics. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XVI. Assignments:					
No	Assignments	Aligned CILOs(symbols)	Week Due		
1	Individual: every student is assigned to solve problems at home. The problems are provided by the teacher at the end of each unit. Problems are related to completion of a chemical reaction, nomenclature, draw structures, mechanisms of reactions and others. The student should deliver his/her work every second week in a specific homework booklet. The teacher may ask the student, either personally, or at the class to make sure that the student work belongs to his/her lonely effort.	d1, d2, c3, c4	7		
2	Group : each group of students will be assigned to do a search-report about one type the mechanism of a reaction.	d1, d2, d3, c3, c4	12

XI	XIX. Course Policies:					
41.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam					
42.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.					
43.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent.					
44.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work					
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course					
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

XV. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, home-works, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XVII. Assignments:									
No	Assignments	Aligned CILOs	Week Due	Mark					
1	Individual: the teacher provide the students with mathematical problems related to the studied topics. Every student is assigned to solve some of those problems individually.	b1, d2	4-13	3					
2	Group: each group of students will be assigned to make a search-report supported by illustrating videos on one of the studied physical phenomenon.	d1, d1, d3	14	2

II. Course Description:

This course provides the student with knowledge related to physical properties of solid, liquid and gaseous matters and various physical phenomena observed in matters. Moreover, the course deals with stability and degradation of matters and physical interactions that occur between matters. The practical part of the course intends to acquire the student the skills to measure and observe those properties and phenomena. The course also links these properties with their observation or application in pharmacy in particular their correlation or influence on design and formulation of pharmaceutical dosage forms design. Therefore, this course can be referred so as to introduction to "pharmaceutics" courses.

i.e. intended to physical properties of solid, liquid and gaseous matters. The practical matters. The practical part of the course intends to acquire the student their observation or application in pharmacy in particular their correlation or influence on design and formulation of pharmaceutical dosage forms design. Therefore, this course can be referred so as to introduction to "pharmaceutics" courses.

i.e. in the course of solid particles are considered as a pharmaceutic of solid particles. In the course of solid particles are course of solid particles and pharmaceutics of solid particles. In the course of solid particles are course of solid particles and pharmaceutics of solid particles are course of solid particles. In the course of solid particles are course of solid particles and pharmaceutics of solid particles are course of solid particles. The course of solid particles are course of solid particles and pharmaceutics of solid particles are course of solid particles. The course of solid particles are course of solid particles are course of solid particles.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, home-works, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI. Assignments:									
No	Assignments	Aligned CILOs	Week Due	Mark					
1	Individual: the teacher provide the students with mathematical problems related to the studied topics. Every student is assigned to solve some of those problems individually.	b1, d2	4-13	3					
2	Group: each group of students will be assigned to make a search-report supported by illustrating videos on one of the studied physical phenomenon.	d1, d1, d3	14	2

IX	Course Policies:			
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam			
2. Tardy: any student who is late for more than 15 minutes from starting the lecture will no allowed to attend the lecture and will be considered absent.				
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.			
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work			
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course			
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

XIV. Course Description:

The course is designed to provide the student basic knowledge in the mechanisms of normal body functions such as homeostasis and feedback mechanisms. It also concerns with normal processes in the cells such as transport of materials trough the cell membrane, membrane potential and cell repair and the composition and regulations of Body fluids, electrolytes and acid-base balance. Moreover, the course provides knowledge in functions and regulations of vital organs/systems in the body including: nervous system, endocrine and muscles. The practical part provides the student with skills to measure biological signs related to nerves and muscles

تم تصميم هذا المقرر الدراسي لتزويد الطالب بالمعرفة والمهارات الأساسية في آليات وظائف الجسم الطبيعية مثل آليات الاستتباب والتغذية الراجعة. كما يهتم المقرر بالعمليات الطبيعية في الخلايا مثل نقل المواد عبر غشاء الخلية قرق الجهد في الغشاء وإصلاح الخلية وتكوين وتنظيم سوائل الجسم والأملاح والتوازن الحمضي القاعدي. علاوة على ذلك ، يوفر المقرر المعرفة في تنظيم وظائف أنظمة أجهزة الجسم الحيوية كالجهاز العصبي والغدد الصماء والعضلات و يزود الجزء العملي الطالب بمهارات قياس العلامات الحيوية ذات الصلة بالأعصاب و العضلات

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

5. Alignment CILOs to PILOs

Knowle	dge & understanding: Upon successful	completion of the course, students will be able to:	
PILO	S	CILOs	
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry	a1. Discuss the concept of homeostasis and feedback mechanisms observed in normal functions of human body organs.	
	and organization of human body.	a2. . Identify the mechanisms of transport of material into and out of human cells.	
		a3. Determine the normal functions and regulation of nervous system, endocrine glands and muscles.	
		a4. Explain the biological role of certain endogenous substances in regulation the normal functions of nervous system, endocrine glands and muscles.	
Intellect	ual skills: Upon successful completion	on of the course, students will be able to:	
B1	Collect interpret and assess information and data relevant to	b1. Identify the signs of normal functions of nervous system, endocrine glands and muscles.	
	pharmacy practice	b2. Interpret the outcomes of normal functions of nervous system, endocrine glands and muscles.	
Professi	onal & practical skills : Upon successf	ful completion of the course, students will be able to:	
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle safely and effectively the materials in physiology Lab	
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate effectively the instruments in physiology lab. to measure biological signs.	

C7			c3 .Search efficiently for information usi	ng
	results in different pharmaceution	al	documented and electronic sources of information.

XVI. Course Description:

This course is complementary to (biochemistry I). The course provide the students with knowledge of types, regulation, chemical structure, biosynthesis, metabolic pathways and physiological/pathological roles of biochemical compounds including enzymes, nucleic acids and hormones and also types, chemical properties, functions and fate in the body as well as pathological conditions resulted from disturbance of exogenous supplements including vitamins and minerals. The practical part provides the student skills of analysis of those compounds in vitro and bioassay them in biological specimens.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XX. Assignments:								
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: the teacher provide the students with biochemical problems related to the studied topics. Every student is assigned to solve some of those problems individually.	d2, c4, c5	4-13	3				
2	Group: each group of students will be assigned to present a search report on one pathological condition related to disturbances in biochemical levels in the body.	d1, d2, d3, c4, c5	14	2

6	Co –requisite :	FMS212 (Anatomy)						
7	Program (s) in which the course is offered:	All Bachelor programs in the faculty of medical sciences						
8	Language of teaching the course:	English						
9	Location of teaching the course:	At the university facility						
10	Prepared by							
11	Date of Approval							

IV. Course Description:

The course introduces students to the basic concepts of human histology, as well as to the histological implications of medicine. The theoretical part will cover epithelial, muscular, connective, and nervous tissues and tissues of different systems with emphasis on their structure and function. The practical part of this course will provide students with the skills to identify the components of different tissues, with a focus on the effect of the tissue structure on the performance of the specific functions of the tissue. The practical part will also enable the student to acquire the skill of distinguishing between healthy tissues and diseased tissues.

يعرف المقرر الدراسي الطلاب بالمفاهيم الأساسية لعلم الأنسجة البشرية، بالإضافة إلى تعريفهم بالمضامين النسيجية في الطب. سيغطي الجزء النظري الأنسجة الظهارية والعضلية الضامة والعصبية وأنسجة الأنظمة المختلفة مع التركيز على هيكلها ووظيفتها. ويهدف الجزء العملي من هذه المقرر إلى تزويد الطلاب بمهارات تحديد مكونات الأنسجة المختلفة مع التركيز على تأثير الشكل النسيجي على أداء الوظائف المحددة للنسيج ويمكن الجزء العملي أيضا للطالب اكتساب مهارة التمييز بين الأنسجة السليمة و الأنسجة المريضة

II. Course Description:

This course provide knowledge in general topics of Pathology which is a significant field in modern medical diagnosis and medical research, concerned mainly with the causal study of disease. The course also provides specific sections of pathology including: immunopathology, genetic pathology and tumor pathology. The course is preceded by (Physiology and clinical immunology) courses in order to make the students able to compare pathological changes of diseases with normal physiological status of body cells and tissues.

يقدم هذا المقرر الدراسي المعرفة في الموضوعات العامة "علم الأمراض" وهو مجال مهم في التشخيص الطبي الحديث والبحوث الطبية، والتي تهتم بشكل رئيسي بالدراسة السببية للمرض. يوفر المقرر أيضًا أقسامًا محددة من علم الأمراض بما في ذلك: علم أمراض المناعة، وعلم الأمراض الوراثي وعلم أمراض الأورام. يسبق المقرر الدراسي مقررات (علم وظائف الأعضاء والمناعة السريرية) بشكل أكبر لتمكين الطلاب من مقارنة التغيرات المرضية للأمراض مع الحالة الفسيولوجية الطبيعية لخلايا وأنسجة الجسم.

XVIII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Field training: each 2-3 students are commissioned to do certain assignments in a real field entity such as drug factory, hospitals, pharmacies under supervision of both the field principle and an academic supervisor

XXI. Assignments:						
No	Assignments	Aligned CILOs	Week Due			
1	Individual: every student is assigned to provide a search-based report on one pathological features such as inflammation, lesion, allergy, etc.	c1, c2, d2	6			
2	Group : each group of students will be assigned to provide a search-based report on a correlation of one disease to its pathological features.	c1, c2, d1, d2, d3	10

XIX. Course Description:

The course is the second part of Pharmaceutical Analytical chemistry courses which provides the student with basic knowledge of principles, instrumentation and applications of basic analytical techniques analysis. This course concerns with study of basic thermal, optical methods and UV-visible and fluorescence spectrophotometry techniques. The practical part of the course provides the student the skills to safely handle chemicals, prepare analytical samples and perform those types of analysis using effectively the related instruments.

المقرر هو الجزء الثاني من مقررات الكيمياء التحليلية الصيدلانية التي تزود الطالب بالمعرفة الأساسية بالتقنيات المستخدمة لتحليل المواد و منها الأدوية و يهتم هذا المقرر بدراسة الطرق الحرارية والبصرية الأساسية وتقنيات القياس الطيفي الضوئي (المرئي والفوق البنفسجي و المضيء) و يوفر الجزء العملي من هذا المقرر للطالب المهارات اللازمة للتعامل مع المواد الكيميائية بأمان ، وإعداد العينات التحليلية وإجراء تلك الأنواع من التحليل باستخدام الأجهزة ذات الصلة بفعالية.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

asses	assessment strategies					
9. /	Alignment CILOs to PILOs					
PILO	Os	CILOs				
Knowle	edge & understanding: Upon completion this	course, students will be able to:				
A3	Explain physicochemical properties of materials and products	a1 . Explain the physicochemical properties of substances that can be utilized for their qualitative and quantitative analysis				
A4	Describe analytical methods, principles, design and development techniques	a2 . Describe the principles of thermal, optical methods and UV-visible and fluorescence spectrophotometry techniques				
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist to perform accurate and precise quantitative and qualitative analysis.				
Intellec	tual skills: Upon completion this course, stude	ents will be able to:				
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret data obtained by thermal, optical methods and UV-visible and fluorescence spectrophotometry techniques				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b2. Design a suitable optical and thermal analysis and UV-visible spectrophotometry method based on the substance physicochemical properties.				
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b3. Select appropriate standard operating procedure for optical and thermal, optical methods and UV-visible and fluorescence spectrophotometry techniques				
В9	Apply mathematical equations to calculate data relevant to pharmacy practices.	b4. Calculate the content % of a material in a sample using UV-visible spectrophotometry method				
Professi	ional & practical skills: Upon completion thi	s course, students will be able to:				
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory				
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory				
C7	Conduct research and utilize the results in different pharmaceutical fields.	c3 .Search efficiently for information using documented and electronic sources of information.				
		c4. Present and report his/her works correctly using

XIX. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XXII	XXII. Assignments:						
No	Assignments	Aligned CILOs	Week Due	Mark			
1	Individual: the teacher provides the students with problems related to the studied topics. Every student is assigned to solve some of those problems individually.	c3, c4, d1, d2	4-13	3			
2	Group: each group of students will be assigned to do a search report on pharmaceutical applications of one method of the studied titrimetric analysis.	c3, c4, d1, d2, d3	14	2

XXI. Learning Resources:

1- Required Textbook(s) (maximum two).

David Harvey. Analytical Chemistry 2.1. 2016, DePauw University

2- Essential References.

Leslie G Chatten: Deans analytical chemistry handbook, 2013, McGraw Hill

3- Electronic Materials and Web Sites etc.

http://dpuadweb.depauw.edu/harvey_web/eTextProject/AC2.1Files/AnalChem2.1.pdf

IX	C.Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

VII. Course Description:

The course is an introduction to specialized pharmacy courses (Medicinal chemistry), as it provides the student with basic knowledge of carbon chemistry from which all organic compounds, including drugs, are derived. The course focuses on uncomplicated organic compounds in terms of their functional chemical groups, chemical composition, physical and chemical properties and their interactions. And methods of preparation and common examples of them, and these compounds include: amines, nitro compounds, aldehydes, ketones, carboxylic acids, esters and amides. The practical part also provides the student with the skills necessary to deal with these compounds and perform tests to identify their reactions in the chemistry lab.

يعتبر المقرر مدخلا أساسيا لمقررات صيدلانية متخصصة هي (الكيمياء الدوائية) حيث يوفر للطالب المعرفة الأساسية لكيمياء الكربون التي منها يتم اشتقاق جميع المركبات العضوية غير المعقدة من حيث مجموعاتها الكيميائية الوظيفية و تركيبها الكيميائي وخصائصها الفيزيائية والكيميائية و تفاعلاتها و طرق تحضيرها والأمثلة الشائعة لها, و تشمل تلك المركبات: الأمينات ومركبات النيترو والألدهيدات والكيتونات والأحماض الكربوكسيلية والإسترات والأميدات اكما يوفر الجزء العملي للطالب المهارات اللازمة للتعامل مع هذه المركبات وإجراء اختبارات التعرف عليها و تفاعلاتها في معمل الكيمياء

IV	IV. Intended learning outcomes of the course: (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies			
PILO	4. Alignment of CILOs to PILOs PILOs Intended learning outcomes of the course (CILOs)			
Know	ledge & understanding: Upon successful c	completion of the course, students will be able to:		
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body.	a1. Explain the significance of organic chemistry in modern sciences.		
A3	Explain physicochemical properties of materials and products	a2. Discuss the properties of models of structural formula, specific properties, mechanisms of reactions and synthesis of uncomplicated organic compounds.		
Intelle	ectual skills: Upon successful completion o	f the course, students will be able to:		
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Differentiate, name and draw the chemical structure of organic compounds.		
		b2. Relate functional group in organic compounds to the physical and chemical properties of the compounds.		
		b3. Predict the catalysts required and the outcomes of a reaction between an organic compound and other chemicals.		
В3	Design an evaluate different types of safe and effective drugs, pharmaceutical dosage forms and cosmetic preparations	b4. Design a sequence to synthesize an organic compound from a parent compound.		
Profes	sional & practical skills : Upon successfu	l completion of the course, students will be able to:		
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory		

C2	Operate different instruments and use	c2. Operate the instruments and perform	m
	emerge technologies for preformulation,	experiments successfully in the laboratory

XX. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do certain assignments such as sud1arizing, internet search, make charts or solve mathematical problems related to the courses topics. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

Development & Quality Assurance Center Faculty of Medical Science Dep. Of Pharmacy Pharmacy Bachelor Program

XXIV. Assignments:					
No	Assignments	Aligned CILOs(symbols)	Week Due		
1	Individual: every student is assigned to solve problems at home. The problems are provided by the teacher at the end of each unit. Problems are related to completion of a chemical reaction, nomenclature, draw structures, mechanisms of reactions and others. The student should deliver his/her work every second week in a specific homework booklet. The teacher may ask the student, either personally, or at the class to make sure that the student work belongs to his/her lonely effort.	d1, d2, c3, c4	7		
2	Group : each group of students will be assigned to do a search-report about one type the mechanism of a reaction.	d1, d2, d3, c3, c4	12

XXI. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do certain assignments such as sud1arizing, internet search, make charts or solve mathematical problems related to the courses topics. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

Development & Quality Assurance Center Faculty of Medical Science Dep. Of Pharmacy **Pharmacy Bachelor Program**

VI. Assignments:				
No	Assignments	Aligned CILOs(symbols)	Week Due	
1	Individual: every student is assigned to solve problems at home. The problems are provided by the teacher at the end of each unit. Problems are related to completion of a chemical reaction, nomenclature, draw structures, mechanisms of reactions and others. The student should deliver his/her work every second week in a specific homework booklet. The teacher may ask the student, either personally, or at the class to make sure that the student work belongs to his/her lonely effort.	d1, d2, c3, c4	7	
2	Group : each group of students will be assigned to do a search-report about one type the mechanism of a reaction.	d1, d2, d3, c3, c4	12	

	VII. Schedule of Assessment Tasks for Students During the Semester

IX	.Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

XXI. Course Description:

The first part of this course provides the student with an introduction to the science and art of designing pharmaceutical dosage forms, especially the roles and types of excipients in the dosage form and the stages of developing the dosage form, which includes the pre-formulation stage, the formulation and development stage, and then the production stage. The second part of the course provides knowledge for preparing liquid dosage forms. The practical part of this course provides the student with the skills necessary to prepare these dosage forms. The practical part provides the student with skill of compounding the pharmaceutical liquid dosage forms in Pharmaceutics Lab.

يزود الجزء الأول في هذا المقرر الطالب بمقدمة عن علم وفن تصميم الأشكال الدوائية خصوصا أدوار وأنواع المواد الغير فعالمة في الشكل الدوائي ومراحل تطوير الشكل الدوائي والتي تشمل مرحلة ما قبل الصياغة ثم مرحلة الصياغة والتطوير ثم مرحلة الانتاج ، كما يوفر الجزء الثاني من المقرر المعرفة والمهارات الأساسية لإعداد الأشكال الدوائية السائلة ويزود الجزء العملي من هذا المقرر الطالب بالمهارات اللازمة لتحضير تلك الأشكال ويزود الجانب العملي من المقرر الطالب بمهاراه تحضير الأشكال الدوائية السائلة يدويا في معمل الصيدلانيات

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

strategies and assessment strategies				
10.	Alignment CILOs to PILOs			
PILO	s	CILOs		
Knowle	dge & understanding: Upon successful complet	ion of the course, students will be able to:		
A4	Describe analytical methods, principles, design and development techniques	a1. Describe the significance of pharmaceutics as art and science of dosage form design		
		a2. Explicit the types and roles of excipients included in different types of pharmaceutical liquid dosage forms.		
		a3. Describe the stages of designing a pharmaceutical dosage form		
A10	Describe the pharmacists role in different pharmacy practices.	a4. Describe the role of pharmacist in formulation of pharmaceutical dosage forms		
A11	Identify the properties of dosage forms and novel drug delivery systems.	a5. Explicit the general properties, advantages and disadvantages of pharmaceutical liquid dosage forms.		
		a6 . Discuss the principles, pharmacopeial requirements, methods of preparation, of various types pharmaceutical liquid dosage forms.		
Intellect	tual skills: Upon successful completion of the co	urse, students will be able to:		
B2	Classify drugs, approaches and other information relevant to pharmacy based on	b1 . Classify pharmaceutical dosage forms and categorize liquid dosage forms.		
	scientific classification system.	b2. Compare between various types of pharmaceutical liquid dosage forms in particular between old and current dosage forms and between solutions and dispersion liquids.		
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b3. Design liquid pharmaceutical dosage forms		

Professional & practical skills: Upon successful completion of the course, students will be able to:

Republic of Yemen Ministry of Higher Education

XX. Course Content:

A - Theoretical Aspect:

Order	Units/ Topics List	CILOs	Sub Topics List	No. of Weeks	conta ct hours
1	Introduction to pharmaceutics	a1, a2, a4, b1, b2	Definitions and brief history of pharmaceutics, pharmacopeia, Definition of dosage form, the components, the need to dosage forms, classification of dosage forms	1	2
2	Pharmaceutical excipients & packaging	a1, a2, a4	 Roles, types with examples Essential: solvents, vehicles, emulsifying agents, binders, etc. Stabilizers: buffers, preservatives, antioxidants, viscosity enhancers, anticake, etc. Bioavailability enhancers: solubilizer Organoleptic excipients: colorants, sweeteners, flavors Excipients for other purposes e.g. isotonic agents Type and function of packaging materials 	2	4
3	Design of dosage form: Preformulation, Formulation and development	a1, a2, a3, a4, b3	 Preformulation stage: physicochemical properties and analytical data required. Scheme of preformulation, Compatibility testing. Formulation: general rules, sources of raw materials, economic impact Development stage Production stage 	3	6
4	Introduction to Non-sterile Pharmaceutical solutions	a1, a2, a3, a4, a5, a6, b1, b2, b3	Definition of solutions, advantages, disadvantages, , classification of pharmaceutical solutions, general method of preparation, enhancement of dissolution, types of solvents : water, cosolvents, non-aqueous solvents	1	2
5	Aqueous Pharmaceutical solutions (1)		Definition, General characters, advantages, disadvantages, method of preparation, formulations and excipients with examples of :	1	2

IV. Course Content:

A – Theoretical Aspect:

Order	Units/ Topics List	CILOs	Sub Topics List	No. of Weeks	conta ct hours
1	Introduction to pharmaceutics	a1, a2, a4, b1, b2	Definitions and brief history of pharmaceutics, pharmacopeia, Definition of dosage form, the components, the need to dosage forms, classification of dosage forms	1	2
2	Pharmaceutical excipients & packaging	a1, a2, a4	 Roles, types with examples Essential: solvents, vehicles, emulsifying agents, binders, etc. Stabilizers: buffers, preservatives, antioxidants, viscosity enhancers, anticake, etc. Bioavailability enhancers: solubilizer Organoleptic excipients: colorants, sweeteners, flavors Excipients for other purposes e.g. isotonic agents Type and function of packaging materials 	2	4
3	Design of dosage form: Preformulation, Formulation and development	a1, a2, a3, a4, b3	 Preformulation stage: physicochemical properties and analytical data required. Scheme of preformulation, Compatibility testing. Formulation: general rules, sources of raw materials, economic impact Development stage Production stage 	3	6
4	Introduction to Non-sterile Pharmaceutical solutions	a1, a2, a3, a4, a5, a6, b1, b2, b3	Definition of solutions, advantages, disadvantages, , classification of pharmaceutical solutions, general method of preparation, enhancement of dissolution, types of solvents : water, cosolvents, non-aqueous solvents	1	2
5	Aqueous Pharmaceutical		Definition, General characters, advantages, disadvantages, method of preparation,	1	2

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XXIII. Course Description:

(Physiology II) is the complement of a previous course (Physiology I) and both are designed to provide the student with knowledge the mechanisms of normal body functions. This course functions and regulations of vital organs/systems in the body including: blood, cardiovascular respiratory, alimentary, renal and immunity system

The two physiology courses are required prior to "pathology" course which concerns with changes in the normal functions of body tissue, organs and systems and lead to formation of diseases. The practical part of the course provides the student with the skill to measure biological signs related to blood, cardiovascular and respiratory systems

(علم وظائف الأعضاء 2) هو مقرر دراسي مكملً لمقرر سابق (علم وظائف الأعضاء 1) وقد تم تصميم كلا المقررين لتزويد الطالب بالمعرفة في آليات وظائف الجسم الطبيعية. يركز هذا المقرر على وظائف وأنظمة الأجهزة الحيوية في الجسم بما في ذلك: الدم والجهاز القلبي الوعائي والجهاز التنفسي والجهاز الهضمي والجهاز الكلوي والجهاز المناعي. يعتبر المقررين (علم وظائف الأعضاء 1 و 2) هامين قبل دراسة مقرر "علم الأمراض" الذي يتعلق بالتغيرات التي تؤدي إلى تكوين الأمراض و التي تحدث في الوظائف الطبيعية لأنسجة وأعضاء و أجهزة الجسم و يزود الجزء العملي الطالب بمهارات قياس العلامات الحيوية و الصفات ذات الصلة بالدم و الجهاز الوعائي و التنفسي

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

12.	8					
Knowle	dge & understanding: Upon successful	l completion of the course, students will be able to:				
PILO	S	CILOs				
	Show understanding of fundamentals of biomedical sciences,	a1. Discuss the concept of mechanisms observed in normal functions of human body organs.				
	physics, mathematics and chemistry and organization of human body.	a2. . Identify the regulation of blood, cardiovascular respiratory, alimentary, renal and immunity system				
		a3. Determine the normal functions and regulation of blood, cardiovascular respiratory, alimentary, renal and immunity system				
		a4. Explain the biological role of certain endogenous substances in regulation the normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system.				
Intellect	ual skills: Upon successful completion	on of the course, students will be able to:				
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Identify the signs of normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system				
		b2. Interpret the outcomes of normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system				
Professi	onal & practical skills : Upon successf	ful completion of the course, students will be able to:				
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle safely and effectively the materials in physiology Lab				
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate effectively the instruments in physiology lab. to measure biological signs.				

Development & Quality Assurance Center

Faculty of Medical Science Dep. Of Pharmacy **Pharmacy Bachelor Program**

C7	Conduct research and utilize the results in different pharmaceutical	c3 .Search efficiently for information using documented and electronic sources of information.
	fields.	c4. Present and report his/her works correctly using appropriate writing rules and technologies media.
Transfe	rable skills: Upon successful completi	on of the course, students will be able to:
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d1. Demonstrate the skills of time management and self-learning.
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d2. Participate efficiently with his colleagues in a team work.

13. Alignment CILOs to teaching strategies and assessment strategies			
(a) Alignment Course Intended Learning Outcomes (CILOs) of knowledge & understanding to Teaching Strategies and Assessment Strategies			
Course Intended Learning Outcomes	Teaching strategies	Assessment Strategies	
a1. Discuss the concept of mechanisms observed in normal functions of human body organs.	Active Lecture	written exams

(Physiology II) is the complement of a previous course (Physiology I) and both are designed to provide the student with knowledge the mechanisms of normal body functions. This course functions and regulations of vital organs/systems in the body including: blood, cardiovascular respiratory, alimentary, renal and immunity system

The two physiology courses are required prior to "pathology" course which concerns with changes in the normal functions of body tissue, organs and systems and lead to formation of diseases. The practical part of the course provides the student with the skill to measure biological signs related to blood, cardiovascular and respiratory systems

(علم وظائف الأعضاء 2) هو مقرر دراسي مكملً لمقرر سابق (علم وظائف الأعضاء 1) وقد تم تصميم كلا المقررين لتزويد الطالب بالمعرفة في آليات وظائف الجسم الطبيعية. يركز هذا المقرر على وظائف وأنظمة الأجهزة الحيوية في الجسم بما في ذلك: الدم والجهاز القلبي الوعائي والجهاز التنفسي والجهاز الهضمي والجهاز الكلوي والجهاز المناعي. يعتبر المقررين (علم وظائف الأعضاء 1 و 2) هامين قبل دراسة مقرر "علم الأمراض" الذي يتعلق بالتغيرات التي تؤدي إلى تكوين الأمراض و التي تحدث في الوظائف الطبيعية لأنسجة وأعضاء و أجهزة الجسم و يزود الجزء العملي الطالب بمهارات قياس العلامات الحيوية و الصفات ذات الصلة بالدم و الجهاز الوعائي و التنفسي

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

1. Alignment CILOs to PILOs

	1. Angument Cilos to Filos				
Knowle	dge & understanding: Upon successful	completion of the course, students will be able to:			
PILO	s	CILOs			
A1	Show understanding of fundamentals of biomedical sciences,	a1. Discuss the concept of mechanisms observed in normal functions of human body organs.			
	physics, mathematics and chemistry and organization of human body.	a2. Identify the regulation of blood, cardiovascular respiratory, alimentary, renal and immunity system			
		a3. Determine the normal functions and regulation of blood, cardiovascular respiratory, alimentary, renal and immunity system			
		a4. Explain the biological role of certain endogenous substances in regulation the normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system.			
Intellect	tual skills: Upon successful completion	n of the course, students will be able to:			
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Identify the signs of normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system			
		b2. Interpret the outcomes of normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system			
Professi	onal & practical skills: Upon successf	ful completion of the course, students will be able to:			
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle safely and effectively the materials in physiology Lab			
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2 . Operate effectively the instruments in physiology lab. to measure biological signs.			
C7	Conduct research and utilize the results in different pharmaceutical	c3 .Search efficiently for information using documented and electronic sources of information.			

Development & Quality Assurance Center Faculty of Medical Science Dep. Of Pharmacy **Pharmacy Bachelor Program**

	fields.	c4. Present and report his/her works correctly using appropriate writing rules and technologies media.
Transfe	rable skills: Upon successful completi	on of the course, students will be able to:
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d1. Demonstrate the skills of time management and self-learning.
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d2. Participate efficiently with his colleagues in a team work.

2. Alignment CILOs to teaching strategies and assessment strategies				
(a) Alignment Course Intended Learning Outcomes (CILOs) of knowledge & understanding to Teaching Strategies and Assessment Strategies				
Course Intended Learning Outcomes	Teaching strategies	Assessment Strategies		
a1. Discuss the concept of mechanisms observed in normal functions of human body organs.	Active Lecture	written exams		
a2. Identify the regulation of blood, cardiovascular respiratory, alimentary, renal and immunity system				
a3. Determine the normal functions and regulation of blood, cardiovascular respiratory, alimentary, renal and immunity system				
a4. Explain the biological role of certain endogenous substances in regulation the normal functions of blood, cardiovascular respiratory, alimentary, renal and immunity system.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

IX	.Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

XXV. Course Description:

The course provides the student with fundamental knowledge in plants as a natural source of drugs. It focuses on the principles and procedures applied for cultivation, collection and processing of plants as crude drugs and the methods used for detection of active constituents and discovering adulteration of medicinal plants. It also provide detailed knowledge on identification features and medical uses of leaves, barks, roots and rhizomes that have scientific-based evidences to be used as complementary and alternative medicines. The practical part of the course provides the student with skills to handle and prepare of plant samples for morphological and microscopical identification tests.

يزود المقرر الطالب بالمعرفة الأساسية بالنباتات كأحد المصادر الطبيعية للأدوية و يهتم المقرر بالمبادئ والإجراءات المطبقة في زراعة وجمع النباتات كأدوية خام والطرق المستخدمة للكشف عن المكونات الفعالة فيها و الكشف عن حالات غشها , كما يوفر معلومات مفصلة عن سمات الهوية والاستخدامات الطبية للأجزاء النباتية (الأوراق واللحاء والجذور و الجذامير) ر التي لها أدلة علمية لاستخدامها كأدوية تكميلية وبديلة و يزود الجزء العملي من المقرر الطالب بالمهارات اللازمة للتعامل مع عينات النباتات وتحضيرها لاختبارات التعرف الظاهرية و المجهرية.

II. Course Description:

The course provides the student with fundamental knowledge in plants as a natural source of drugs. It focuses on the principles and procedures applied for cultivation, collection and processing of plants as crude drugs and the methods used for detection of active constituents and discovering adulteration of medicinal plants. It also provide detailed knowledge on identification features and medical uses of leaves, barks, roots and rhizomes that have scientific-based evidences to be used as complementary and alternative medicines. The practical part of the course provides the student with skills to handle and prepare of plant samples for morphological and microscopical identification tests.

يزود المقرر الطالب بالمعرفة الأساسية بالنباتات كأحد المصادر الطبيعية للأدوية و يهتم المقرر بالمبادئ والإجراءات المطبقة في زراعة وجمع النباتات كأدوية خام والطرق المستخدمة للكشف عن المكونات الفعالة فيها و الكشف عن حالات غشها , كما يوفر معلومات مفصلة عن سمات الهوية والاستخدامات الطبية للأجزاء النباتية (الأوراق واللحاء والجذور و الجذامير) ر التي لها أدلة علمية لاستخدامها كأدوية تكميلية وبديلة و يزود الجزء العملي من المقرر الطالب بالمهارات اللازمة للتعامل مع عينات النباتات وتحضيرها لاختبارات التعرف الظاهرية و المجهرية.

III. Intended learning outcomes of the course (CILOs) and their
alignment to Program Intended learning outcomes (PILOs),
teaching strategies and assessment strategies
1 Alignment CII Og to DII Og

	nment to Program Intended learning outcomes (PILOs), hing strategies and assessment strategies					
	1. Alignment CILOs to PILOs					
	PILOs CILOs					
Knowle	dge & understanding: Upon successful comp	letion of the course, students will be able to:				
A4	Describe analytical methods, principles, design and development techniques	 a1. Explicit the methods used for detection of active constituents and discovering adulteration of medicinal plants. a2. Discuss the principles and procedures applied for cultivation, collection and processing of plants as crude drugs. 				
A6	Explain the basis of complementary and alternative medicines	 a3. Identify the botanical origin, morphological and microscopical characteristics of common medicinal leaves, barks, roots and rhizomes. a4. Determine the active constituents and therapeutic use of medicinal leaves, barks, roots and rhizomes. 				
A10	Describe the pharmacists role in different pharmacy practices.	a5. Describe his/her role as pharmacist in identification and evaluation of medicinal plants				
Intellect	tual skills: Upon successful completion of the	course, students will be able to:				
B1	Collect interpret and assess information and data relevant to pharmacy practice	 b1. Express with drawings the morphology and key microscopical features of medicinal plants b2. Differentiate between medicinal leaves, barks, roots and rhizomes based on morphological and microscopical features. 				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b3 .Classify active constituents in medicinal plants.				
B4	Select appropriate standard operation procedures to conduct qualitative and quantitative analysis.	b4. Select standard operation procedures to identify medicinal plants and crude drugs				
Professi	onal & practical skills: Upon successful com	pletion of the course, students will be able to:				
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: every student is assigned to do a search on the pharmaceutical products available in the drug market of one plant drug studied in the course.	c4, c5, d2	4-13	3				
2	Group : each group of students will be assigned to do search report for adulteration of one crude drug studied in the course.	c4, c5, d2, d3	14	2

XXVII. Course Description:

This course is the first among (Medicinal chemistry) courses which are designed to provide knowledge and skills in chemistry of medicinal agents (drugs). The first part of the course deals with an introduction to drug design, stereochemistry and chemistry of drug metabolism while the second part deals with the physicochemical properties, chemical synthesis, structure activity relationship (SAR), pharmacophore molecules and metabolism of drugs affecting autonomic nervous system and autacoids. The practical part provides the student the skill to identify the physicochemical, spectroscopic, chromatographic specification of the drugs under study The course is co-requisite with (Pharmacology & Therapeutics I) as both deals with the same medicinal agents.

هذا المقرر هو الأول بين مقررات (الكيمياء الدوائية) التي ستزود الطالب بالمعرفة و المهارات اللازمة في كيمياء الدواء و يتناول هذا المقرر أولا : مقدمة لتصميم الأدوية والكيمياء الفراغية وكيمياء التمثيل الغذائي للدواء و ثانيا : الخواص الفيزيائية والكيميائية و التخليق الكيميائي وعلاقة الخواص الدوائية بالتركيب الكيميائي (SAR) واستقلاب الأدوية التي تؤثر على الجهاز العصبي اللاإرادي وعلى الأدوية التي تؤثر على العوامل الحيوية التي تعمل كهرمونات موضعية (autacoids), ويزود الجزء العملي الطالب مهارة التعرف على المواصفات الفيزيائية والكيميائية والطيفية والكروماتوجرافية للأدوية قيد الدراسة. يعد هذا المقرر متطلبًا مشتركًا مع (علم الأدوية والتداوي 1) حيث يركز كلاهما على نفس الأدوية.

XXV. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VII	VII. Assignments:						
No	Assignments	Aligned CILOs	Week Due				
2	Group: each group of students will be assigned to hypothetically design newer drugs form a studied patent drug using SAR principles	b5, c3, c4, d1, d3	8

4.	Study level/ semester at which this course is offered:	(Third) Year – (first) semester					
5.	Pre –requisite (if any):						
6.	Co –requisite (if any):	PHR31	.3 (Pharma	cology & Tl	herapeutio	s I)	
7.	Program (s) in which the course is offered:	Pharmacy Bachelor					
8.	Language of teaching the course:	ENGLISH					
9.	Location of teaching the course:	At the university facility					
10	Date of Approval						

II. Course Description:

This course is the first among (Medicinal chemistry) courses which are designed to provide knowledge and skills in chemistry of medicinal agents (drugs). The first part of the course deals with an introduction to drug design, stereochemistry and chemistry of drug metabolism while the second part deals with the physicochemical properties, chemical synthesis, structure activity relationship (SAR), pharmacophore molecules and metabolism of drugs affecting autonomic nervous system and autacoids. The practical part provides the student the skill to identify the physicochemical, spectroscopic, chromatographic specification of the drugs under study The course is co-requisite with (Pharmacology & Therapeutics I) as both deals with the same medicinal agents.

هذا المقرر هو الأول بين مقررات (الكيمياء الدوائية) التي ستزود الطالب بالمعرفة و المهارات اللازمة في كيمياء الدواء و يتناول هذا المقرر أولا : مقدمة لتصميم الأدوية والكيمياء الفراغية وكيمياء التمثيل الغذائي للدواء و ثانيا : الخواص الفيزيائية والكيميائية و التخليق الكيميائي وعلاقة الخواص الدوائية بالتركيب الكيميائي (SAR) واستقلاب الأدوية التي تؤثر على الجهاز العصبي اللاإرادي وعلى الأدوية التي تؤثر على العوامل الحيوية التي تعمل كهرمونات موضعية (autacoids), ويزود الجزء العملي الطالب مهارة التعرف على المواصفات الفيزيائية والكيميائية والطيفية والكروماتوجرافية للأدوية قيد الدراسة. يعد هذا المقرر متطلبًا مشتركًا مع (علم الأدوية والتداوي 1) حيث يركز كلاهما على نفس الأدوية.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teaching strategies and assessment strategies 1. Alignment CILOs to PILOs					
PILOs CILOs					
Knowled	ge & understanding: Upon successful completion	of the course, students will be able to:			
A3	Explain physicochemical properties of materials and products	a1. Explain the correlation between the chemical and therapeutic properties of drugs to their molecular structure.			
A4	Describe analytical methods, principles, design and development techniques	a2. Explain the principles of synthesis, purification and metabolic reactions of drugs affecting autonomic nervous system, autacoids and respiratory system.			
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist in chemical synthesis of drugs.			

Intellectu	llectual skills: Upon successful completion of the course, students will be able to:					
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret the rules of structure-activity relationship to construct pharmacophore of drugs affecting autonomic nervous system, autacoids and respiratory system.				
		b2. Express molecular structure, synthesis and reactions of drugs with hand-drawing				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification	b3. Classify, chemically, the drugs affecting autonomic nervous system, autacoids and respiratory system.				
	system.	b4 . Compare between chemically related drugs based on their chemical structure				
В3	. Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b5. Design newer drugs affecting autonomic nervous system, autacoids and respiratory system using structure activity relationship rules.				
Professio	Professional & practical skills: Upon successful completion of the course, students will be able to:					
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory				

Development & Quality Assurance Center Faculty of Medical Science Dep. Of Pharmacy **Pharmacy Bachelor Program**

C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory		
C7	Conduct research and utilize the results in different pharmaceutical	c3 .Search efficiently for information using documented and electronic sources of information.		
	fields.	c4 Present and report his/her works correctly using appropriate writing rules and technologies media.		
Transfer	able skills: Upon successful completion	of the course, students will be able to:		
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in teamactivities.	d1. Communicate effectively and behave in discipline with colleagues.		
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d2. Demonstrate the skills of time management and self-learning.		
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d3. Participate efficiently with his colleagues in a team work.		

2. Alignment CILOs to teaching strategies and assessment strategies (a) Alignment Course Intended Learning Outcomes (CILOs) of knowledge & understanding to

XXVI. Teaching strategies of the course:

Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XVIII	XVIII. Assignments:						
No	Assignments	Aligned CILOs	Week Due	Mark			
1	Individual: every student is assigned to solve the problems provided by the teacher at the end of each unit.	b2, c5, c6, d4	4-13	3			
2	Group: each group of students will be assigned to provide a video of simulation of one of the analytical technique studied. The students of each group must explain the simulation for other students.	c5, c6, d1, d2, d4	14	2

X	V. Course Policies:
25.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
26.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
27.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent.
28.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teaching strategies and assessment strategies							
1. A	Alignment CILOs t	o PILOs					
No.	PILOs	CILOs					
1.	A2	a1. Explicit the physicochemical properties of matters that are used as basis for qualitative and quantitative instrumental analysis.					
2.	a2. Discuss the principles, instrumentations and pharmaceutic applications of electrochemical, thermal, particle-size and optionstrumental analytical techniques.						
3.		a3. Explicit the advantages of instrumental techniques over manual classical techniques.					
4.	A 4	a4. Comprehend his/her role as a pharmacist in providing precise and accurate analytical results based on implementing strict standard operative and analytical procedures.					
5.	B1 b1. Interpret correctly outcome data of an instrumental analysis.						
6.		b2. Solve problems related to the studied instrumental analytical techniques including identification and/or quantitation of test samples.					
7.	B2	b3 .Classify instrumental analytical techniques based on their principles and applications.					
8.		b4. Compare between various types of instrumental analytical techniques.					
9.	B4	b5. Assess the accuracy and precision of an instrumental analytical techniques.					
10.		b6. Select the appropriate technique to perform an instrumental quantitative/qualitative analysis.					
11.	C1	c1. Handleefficiently the tools and chemicals used in pharmaceutical instrumental analysis Lab.					
12.		c2. Operate successfully the instruments used in pharmaceutical instrumental analysis Lab.					
13.	C2	c3. Perform effectively the experiments and practical tasks including					
		qualitative and quantitative analysis of substances in a given sample using standard procedures.					
14.	C3	c4 .Take the required safety criteria during performing different types of practical and professional pharmacy works.					

Development & Quality Assurance Center Faculty of Medical Science Dep. Of Pharmacy **Pharmacy Bachelor Program**

15.	C4	c5 .Search efficiently for information using documented and electronic sources of information.
16.		c6. Present and report his/her works correctly using appropriate writing rules and technologies media.
17.	D1	d1. work successfully in team-work.
18.	D2	d2. Behave in discipline during practicing practical and professional works and assignments
19.	D3	d3 Communicate effectively with his/her colleagues.
20.	D4	d4. Demonstrate time management and self-learning during performing practical and professional works and assignments.

2. Alignment CILOs to teaching strategies and assessment strategies

XXXI. Course Description:

The course is the third and last one among courses of (Phar. Organic chemistry) which all provide the student with knowledge and skills of organic chemistry. This course focuses on the functional chemical groups, chemical composition, physical and chemical properties, synthesis, reactions of complicated organic compounds (monocyclic, polycyclic, homocyclic and heterocyclic). The practical part also provides the student with the skills necessary to deal with these compounds and perform tests to identify their reactions in the chemistry lab.

هذا المقرر هو الثالث والأخير من بين مقررات (الكيمياء العضوية الصيدلانية) التي تزود جميعها الطالب بالمعرفة والمهارات في كيمياء المركبات العضوية المعقدة (أحادية الحلقة، متعددة الحلقات، متجانسة الحلقية وغير متجانسة) من حيث مجموعاتها الكيميائية الوظيفية، وتركيبها الكيميائي، لخصائصها الفيزيائية والكيميائية، وتفاعلاتها الكيميائية وطرق تخليقها كيميائيا كما يزود الجانب العملي الطالب بالمهارات اللازمة للتعامل مع هذه المركبات وإجراء الاختبارات للتعرف على تلك المركبات وتفاعلاتها في معمل الكيمياء.

XVIII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XXX. Assignments:							
No	Assignments	Aligned CILOs	Week Due				
1	Individual: the teacher provide the students with chemical problems related to the studied topics. Every student is assigned to solve some of those problems individually.	d1, d2, c3, c4	7				
2	Group: each group of students will be assigned to do a search-report supported by illustrating figures for all drugs belonging to one of the studied homocyclic/hetrocyclic organic compounds.	d1, d2, d3, c3, c4	12

XXXIII. Course Description:

The course is designed to provide the students with knowledge related to applications of microbiology in pharmaceutical industry and research including sterilization, preservation, study of microbial content, and antimicrobial activity of drugs, products and extracts. The practical part of the course will provide the student skills to perform such missions in the microbiology Lab.

تم تصميم هذا المقرر لتزويد الطلاب بالمعرفة المتعلقة بتطبيقات علم الأحياء الدقيقة في صناعة الأدوية والأبحاث الصيدلانية بما في ذلك التعقيم والحفظ ودراسة المحتوى الميكروبي وتطبيقات دراسة فعالية المضادات الحيوية والمنتجات الأخرى والمستخلصات الطبيعية ضد الميكروبات، وسيوفر الجزء العملي من المقرر لطالب المهارات المعملية تلك المهام في مختبر علم الأحياء الدقيقة.

XXIX. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VIII	VIII. Assignments:						
No	Assignments	Aligned CILOs	Week Due	Mark			
1	Individual: every student is assigned to do a search report on the pharmacopeial specification of microbial content and sensitivity inhibition zone of one of the studied microbial pathogen.	c3, c4, d2	4-13	3			
2	Group: each group of students will be assigned to provide a search-based report on natural substances (e.g. plant, minerals) that have antimicrobial activity against one of the studied microbial pathogen.	c3, c4, d1, d2, d3	14	2

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

IX	IX. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: every student is assigned to do a search report on the pharmacopeial specification of microbial content and sensitivity inhibition zone of one of the studied microbial pathogen.	c3, c4, d2	4-13	3				
2	Group: each group of students will be assigned to provide a search-based report on natural substances (e.g. plant, minerals) that have antimicrobial activity against one of the studied microbial pathogen.	c3, c4, d1, d2, d3	14	2

XXXV. Course Description:

This course is the second part of "Pharmaceutics "courses that are intended to provide the student with knowledge in preformulation, formulation and preparation of pharmaceutical dosage forms. The course deals with designing of compressed gases (pharmaceutical aerosols), semisolid dosage forms (ointments, creams, pastes and gels) and suppositories. The practical part provides the student with skills to prepare those dosage forms in Pharmaceutics Lab.

هذا المقرر هو الجزء الثاني من مقررات "الصيدلانيات" التي تهدف إلى تزويد الطالب بالمعرفة في دراسات م اقبل الصياغة وصياغة وتحضير الأشكال الدوائية و يركز المقرر على الأشكال الغازية المضغوطة و الأشكال شبه الصلبة (المراهم والكريمات والمعاجين و الجل) و كذلك التحاميل, و يوفر الجزء العملي للطالب المهارات اللازمة لإعداد تلك الأشكال الصيدلانية في مختبر الصيدلانيات.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teach	teaching strategies and assessment strategies				
20.	Alignment CILOs to PILOs				
PILO	s	CILOs			
A4	Describe analytical methods, principles, design and development techniques	 a1. Describe the significance of pharmaceutics as art and science of dosage form design a2. Explicit the types and roles of excipients included in aerosols, semisolid preparations and suppositories. a3. Describe the stages of designing 			
A10	Describe the phermenists role in different	pharmaceutical aerosols, semisolid preparations and suppositories.			
	Describe the pharmacists role in different pharmacy practices.	a4. Describe the role of pharmacist in formulation of pharmaceutical aerosols, semisolid preparations and suppositories.			
A11	Identify the properties of dosage forms and novel drug delivery systems.	 a5. Explicit the general properties, advantages and disadvantages of pharmaceutical aerosols, semisolid preparations and suppositories. a6. Discuss the principles, pharmacopeial requirements, methods of preparation, of various types of pharmaceutical aerosols, semisolid preparations and suppositories. 			
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	 b1. Classify pharmaceutical aerosols, semisolid preparations and suppositories. b2. Compare between various types of pharmaceutical aerosols, semisolid preparations and suppositories. 			
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b3. Design pharmaceutical aerosols, semisolid preparations and suppositories.			
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory			
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory			
C5	Employ the relevant ways to produce	c3. Employ the relevant way to prepare

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teach	teaching strategies and assessment strategies					
1. /	Alignment CILOs to PILOs					
PILO	S	CILOs				
A4	Describe analytical methods, principles, design and development techniques	 a1. Describe the significance of pharmaceutics as art and science of dosage form design a2. Explicit the types and roles of excipients included in aerosols, semisolid preparations and suppositories. a3. Describe the stages of designing pharmaceutical aerosols, semisolid preparations 				
A10	Describe the pharmacists role in different pharmacy practices.	and suppositories. a4. Describe the role of pharmacist in formulation of pharmaceutical aerosols, semisolid preparations and suppositories.				
A11	Identify the properties of dosage forms and novel drug delivery systems.	 a5. Explicit the general properties, advantages and disadvantages of pharmaceutical aerosols, semisolid preparations and suppositories. a6. Discuss the principles, pharmacopeial requirements, methods of preparation, of various types of pharmaceutical aerosols, semisolid preparations and suppositories. 				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	 b1. Classify pharmaceutical aerosols, semisolid preparations and suppositories. b2. Compare between various types of pharmaceutical aerosols, semisolid preparations and suppositories. 				
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b3. Design pharmaceutical aerosols, semisolid preparations and suppositories.				
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory				
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory				
C5	Employ the relevant ways to produce	c3. Employ the relevant way to prepare

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: every student is assigned to present a search report supported with images on 5 trade names (commercial preparations) of the studied dosage forms	c4, c5, d2	4-13	3				
2	Group: every group is assigned to present an illustrating videos on lab. And industrial preparation of 3 types of studies dosage forms.	c4, c5, d1, d2, d3	14	2

IX	Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

29	Program (s) in which the course is offered:	Pharmacy Bachelor					
29	Language of teaching the course:	ENGLISH					
29	Location of teaching the course:	At the university facility					
29	Date of Approval						

L: lecturing; Tut: Tutorial, S: seminar; P: practical; Tr.: training

XXXVII. Course Description:

The course provides the students with knowledge of general pharmacology including sources of drugs, introduction to pharmacokinetics, pharmacodynamic aspects such as mechanisms of actions of drugs, drug/response curve, drug adverse reactions, drug-drug interactions, etc. The course also covers the study of pharmacodynamic and pharmacokinetics of drugs affecting autonomic nervous system and autacoids

يزود المقرر الدراسي الطلاب بالمعرفة الأساسية عن علم الأدوية العام بما في ذلك مصادر الأدوية، ومقدمة عن الحرائك الدوائية ، والجوانب الديناميكية الدوائية) مثل آليات عمل الأدوية ، ومنحنى الاستجابة الدوائية ، ردود الفعل العكسية للأدوية ، و التداخلات الدوائية ، إلخ. يغطي المقرر أيضا دراسة الديناميكا الدوائية والحركية الدوائية للأدوية التي تؤثر على الجهاز العصبي اللاإرادي و الأدوية المؤثرة على العوامل الحيوية التي تعمل كهرمونات محلية (autacoids) .

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feed-back correction & evaluation

VI	VI. Assignments:						
No	Assignments	Aligned CILOs	Week Due				
1	Individual: every student is assigned to solve a list of problems related to advising healthcare of medicines use based comparison of drug benefits and risks for specific patients e.g. CVS patients, renal failure patients, etc.	b1, c1, d1	6-12

	X. Course Policies: (Based on the Uniform Students' By law (2007)
1	Class Attendance: Class Attendance is mandatory. A student is considered absent and shall be banned from taking the final exam if his/her absence exceeds 25% of total classes.
2	Tardiness: A student will be considered late if he/she is not in class after 10 minutes of the start time of class.
3	Exam Attendance/Punctuality: No student shall be allowed to the exam hall after 30 minutes of the start time, and shall not leave the hall before half of the exam time has passed.
4	Assignments & Projects: Assignments and projects must be submitted on time. Students who delay their assignments or projects shall lose the mark allocated for the same.
5	Cheating: Cheating is an act of fraud that results in the cancelation of the student's exam or assignment. If it takes place in a final exam, the penalties stipulated for in the Uniform Students' Bylaw (2007) shall apply.
6	Forgery and Impersonation: Forgery/Impersonation is an act of fraud that results in the cancelation of the student's exam, assignment or project. If it takes place in a final exam, the penalties stipulated for in the Uniform Students' Bylaw (2007) shall apply.
7	Other policies: The University official regulations in force will be strictly observed and students shall comply with all rules and regulations of the examination set by the Department, Faculty and University Administration.

	X. Course Policies: (Based on the Uniform Students' By law (2007)
1	Class Attendance: Class Attendance is mandatory. A student is considered absent and shall be banned from taking the final exam if his/her absence exceeds 25% of total classes.
2	Tardiness: A student will be considered late if he/she is not in class after 10 minutes of the start time of class.
3	Exam Attendance/Punctuality: No student shall be allowed to the exam hall after 30 minutes of the start time, and shall not leave the hall before half of the exam time has passed.
4	Assignments & Projects: Assignments and projects must be submitted on time. Students who delay their assignments or projects shall lose the mark allocated for the same.
5	Cheating: Cheating is an act of fraud that results in the cancelation of the student's exam or assignment. If it takes place in a final exam, the penalties stipulated for in the Uniform Students' Bylaw (2007) shall apply.
6	Forgery and Impersonation: Forgery/Impersonation is an act of fraud that results in the cancelation of the student's exam, assignment or project. If it takes place in a final exam, the penalties stipulated for in the Uniform Students' Bylaw (2007) shall apply.
7	Other policies: The University official regulations in force will be strictly observed and students shall comply with all rules and regulations of the examination set by the Department, Faculty and University Administration.

Course Description: III.

This course is the complement of a previous course (Pharmacognosy I) and both are designed to provide the student with basic knowledge in medicinal plants as a natural source of drugs. This course deals with botanical origin, morphological, microscopical features and medical uses of flowers, seeds, fruits, herbs and unrecognized plant parts that are evidence-based proved to be used as complementary and alternative medicines. The practical part provide the student with skills to prepare plant samples and perform their morphological and microscopical identification in Pharmacognosy Lab.

هذا المقرر الدراسي هو المكمل لمقرر سابق (علم العقاقير 1) وكلا المقررين مصممان لتزويد الطالب بالمعرفة الأساسية في النباتات الطبية كمصدر طبيعي للأدوية. يتناول هذا المقرر الأصل النباتي والسمات الظاهرية والمجهرية والاستخدامات الطبية للزهور والبذور والفواكه والأعشاب وأجزاء النباتات غير المعرفة والمثبتة على أساس الأدلة والتي ثبت استخدامها كأدوية تكميلية وبديلة. يزود الجانب العملى الطالب بالمهارات اللازمة لإعداد العينات النباتية وإجراء اختبارات التعرف المظهري والمجهري لها في مختبر العقاقير.

XXXII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

Х	X. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: every student is assigned to do a search on the pharmaceutical products available in the drug market of one plant drug studied in the course.	c4, c5, d2	4-13	3				
2	Group : each group of students will be assigned to do search report for adulteration of one crude drug studied in the course.	c4, c5, d2, d3	14	2

This course deals with botanical origin, morphological, microscopical features and medical uses of flowers, seeds, fruits, herbs and unrecognized plant parts that are evidence-based proved to be used as complementary and alternative medicines. The practical part provide the student with skills to prepare plant samples and perform their morphological and microscopical identification in Pharmacognosy Lab.

هذا المقرر الدراسي هو المكمل لمقرر سابق (علم العقاقير 1) وكلا المقررين مصممان لتزويد الطالب بالمعرفة الأساسية في النباتات الطبية كمصدر طبيعي للأدوية. يتناول هذا المقرر الأصل النباتي والسمات الظاهرية والمجهرية والاستخدامات الطبية للزهور والبذور والفواكه والأعشاب وأجزاء النباتات غير المعرفة والمثبتة على أساس الأدلة والتي ثبت استخدامها كأدوية تكميلية وبديلة. يزود الجانب العملي الطالب بالمهارات اللازمة لإعداد العينات النباتية وإجراء اختبارات التعرف المظهري والمجهري لها في مختبر العقاقير.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: every student is assigned to do a search on the pharmaceutical products available in the drug market of one plant drug studied in the course.	c4, c5, d2	4-13	3				
2	Group : each group of students will be assigned to do search report for adulteration of one crude drug studied in the course.	c4, c5, d2, d3	14	2

IX	Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecturewill not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

25	Pre -requisite (if any):	Medicinal chemistry I			
26	Co –requisite (if any):				
27	Program (s) in which the course is offered:	At the university facility			
28	Language of teaching the course:	ENGLISH			
29	Location of teaching the course:	IN THE UNIVERSITY			
30	Prepared by				
31	Date of Approval				

L: lecturing; P: practical; T.: training

II. Course Description:

This course is the second among (Medicinal chemistry) courses which are designed to provide knowledge and skills in chemistry of medicinal agents (drugs). It deals with the physicochemical properties, chemical synthesis, structure activity relationship (SAR), pharmacophore molecules and metabolism of drugs affecting smooth muscles and drug used to treat respiratory, Central nervous systems and gastrointestinal tract. The course is co-requisite with (Pharmacology II) as both deal with the same medicinal agents.

هذا المرر هو الثاني بين مقررات (الكيمياء الدوائية) المصممة لتوفير المعرفة والمهارات في كيمياء الأدوية. يركز هذا المقرر بشكل خاص على الخصائص الفيزيائية والكيميائية والتركيب الكيميائي وعلاقة التأثير بالشكل البنائي (SAR) واستقلاب الأدوية التي تؤثر على العضلات الملساء والأدوية المستخدمة في علاج أمراض الجهاز التنفسي و الجهاز العصبي المركزي و الجهاز الهضمي. هذا المقرر يؤخذ بالتزامن مع مقرر (علم الأدوية 2) حيث يركز كلاهما على نفس الأدوية.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

alignment to Program Intended learning outcomes (PILOs),				
teaching strategies and assessment strategies				
3. Alignment CILOs to PILOs				
PILO	s	CILOs		
Knowle	dge & Understanding: Upon successful	completion of the course, students will be able to:		
A3	Explain physicochemical properties of materials and products	a1. Explain the correlation between the chemical and therapeutic properties of drugs to their molecular structure.		
A4	Describe analytical methods, principles, design and development techniques	a2. Explain the principles of synthesis, purification and metabolic reactions of used to treat respiratory, CNS and GIT disorders.		
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist in chemical synthesis of drugs.		
Intellect	tual skills : Upon successful completion	of the course, students will be able to:		
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret the rules of structure-activity relationship to construct pharmacophore of respiratory, CNS and GIT disorders.		
		b2. Express molecular structure, synthesis and reactions of drugs with hand-drawing		
B2	Classify drugs, approaches and other information relevant to pharmacy	b3. Classify, chemically, the drugs for respiratory, CNS and GIT disorders		
	based on scientific classification system.	b4 . Compare between chemically related drugs based on their chemical structure		
В3	. Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b5. Design newer drugs for respiratory, CNS and GIT disorders.

V. Teaching strategies of the course:

Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

II. Course Description:

This course is the second among (Medicinal chemistry) courses which are designed to provide knowledge and skills in chemistry of medicinal agents (drugs). It deals with the physicochemical properties, chemical synthesis, structure activity relationship (SAR), pharmacophore molecules and metabolism of drugs affecting smooth muscles and drug used to treat respiratory, Central nervous systems and gastrointestinal tract. The course is co-requisite with (Pharmacology II) as both deal with the same medicinal agents.

هذا المرر هو الثاني بين مقررات (الكيمياء الدوائية) المصممة لتوفير المعرفة والمهارات في كيمياء الأدوية. يركز هذا المقرر بشكل خاص على الخصائص الفيزيائية والكيميائية والتركيب الكيميائي وعلاقة التأثير بالشكل البنائي (SAR) واستقلاب الأدوية التي تؤثر على العضلات الملساء والأدوية المستخدمة في علاج أمراض الجهاز التنفسي و الجهاز العصبي المركزي و الجهاز الهضمي. هذا المقرر يؤخذ بالتزامن مع مقرر (علم الأدوية 2) حيث يركز كلاهما على نفس الأدوية.

V. Teaching strategies of the course:

Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI. Course Description:

This course deals with the study of applications of biotechnological methods such as recombinant DNA, polymerase chain reaction (PCR) and peptide technologies in pharmacy in particular the use of these techniques in analysis of genes and also the recent production of certain medicines such as monoclonal antibodies and others and their therapeutic uses. Also this course concerns with the study of genetic therapy for complicated diseases (treatment by replacement of the defected genes with normal genes).

يتناول هذا المقرر الدراسي دراسة تطبيقات طرق التكنولوجيا الحيوية مثل الحمض النووي المؤتلف ، وتفاعل البوليميراز المتسلسل (PCR) وتقنيات الببتيدات في الصيدلة ، ولا سيما استخدام هذه التقنيات في تحليل الجينات وكذلك الإنتاج الحديث لبعض الأدوية مثل الأجسام المضادة وحيدة النسيلة وغيرها واستخداماتها العلاجية. كما يهتم هذا المقرر بدراسة العلاج الجيني للأمراض المعقدة (العلاج باستبدال الجينات المعيبة بالجينات السليمة).

XXIII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

II. Course Description:

This course deals with the study of applications of biotechnological methods such as recombinant DNA, polymerase chain reaction (PCR) and peptide technologies in pharmacy in particular the use of these techniques in analysis of genes and also the recent production of certain medicines such as monoclonal antibodies and others and their therapeutic uses. Also, this course concerns with the study of genetic therapy for complicated diseases (treatment by replacement of the defected genes with normal genes).

يتناول هذا المقرر الدراسي دراسة تطبيقات طرق التكنولوجيا الحيوية مثل الحمض النووي المؤتلف، وتفاعل البوليمير از المتسلسل (PCR) وتقنيات الببتيدات في الصيدلة، ولا سيما استخدام هذه التقنيات في تحليل الجينات وكذلك الإنتاج الحديث لبعض الأدوية مثل الأجسام المضادة وحيدة النسيلة وغيرها واستخداماتها العلاجية. كما يهتم هذا المقرر بدراسة العلاج الجيني للأمراض المعقدة (العلاج باستبدال الجينات المعيبة بالجينات السليمة).

	Alignment CILOs to PILOs	trategies				
PILO		CILOs				
Knowle	edge and understanding: upon completion of	the course, students will be able to:				
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body.	a1. Explain the physicochemical properties of biotechnology drug products.				
A3	Explain physicochemical properties of materials and products	 a2. Explain the approaches and analytical techniques applied in biotechnology relevant to gene analysis and production of biotechnology-drug products. a3. Identify the actions, therapeutic uses and adverse effects of biotechnology-drug products. 				
A4	Describe analytical methods, principles, design and development techniques.	a4. Describe the role of pharmacist in developing and employing biotechnology techniques in pharmacy practice.				
Intellec	tual skills: upon completion of the course, stu	idents will be able to:				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b1 . Classify biotechnology drugs.				
B4	Select appropriate standard operation procedures to conduct qualitative and quantitative analysis.	b2 . Design a suitable method to extract, isolate and purify DNA and genes from human samples				
Profess	ional and practical skills: upon completion of	the course, students will be able to:				
C7	Conduct research and utilize the results in different pharmaceutical fields.	c1 .Search efficiently for information using documented and electronic sources of information.				
		c2. Present and report his/her works correctly using appropriate writing rules and technologies media.				
Transfe	erable skills: upon completion of the course, s	tudents will be able to:

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

	Alignment CILC	Os to PILOs
No.	PILOs	CILOs
1.	A1	a1. Identify and describe the microscopical/morphological features of common pathogenic parasites including protozoa , helminthes and arthropods.
2.		a2. Determine life cycle, pathogenicity, diagnosis, management of spread and treatment of common pathogenic parasites.
3.	A2	a3 . Discuss the principles and technologies of parasitology applied for sampling and diagnosis of common pathogenic parasites infections
4.	B1	b1. Differentiate between similar parasites using morphological and microscopical techniques
5.	B2	b2 .Classify pathogenic parasites.
6.		b3. Relate the severity of parasitic infections to its affecting factors such as immunity.
7.	C1	c1. Handleefficiently the tools and chemicals used in parasitology Lab.
8.		c2. Operate successfully the instruments used in parasitology Lab.
9.	C2	c3 . Perform effectively the experiments and practical tasks in microbiology Lab. including microscopical investigation using standard procedures.
10.	С3	c4 .Take the required safety criteria during performing different types of practical and professional pharmacy works
11.	C4	c5 .Search efficiently for information using documented and electronic sources of information.
12.		c6. Present and report his/her works correctly using appropriate writing rules and technologies media.
13.	D1	d1. work successfully in team-work.
14.	D2	d2. Show respect to life & behave in discipline during practicing practical and professional works and assignments.
15.	D3	d3. Communicate effectively with his/her colleagues.
16.	D4	d4. Demonstrate the ability of time management and self-learning.

V. Teaching strategies of the course:

Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	. Assignments:			
No	Assignments	Aligned CILOs	Week Due	Mark
1	Individual: every student is assigned to do a summary report on one of the studied pathogenic parasite.	c5, c6,	4-13	3
2	Group: each group of students will be assigned to make a letter of education to community about infection of one of the studied parasite.	c5, c6, d1, d3,	14	2

L: lecturing ; P: practical ; T.: training

X. Course Description:

This course is the Third and last part of "Pharmaceutics "courses which all are intended to provide the student with knowledge in preformulation, formulation and preparation of pharmaceutical dosage forms in small and large scales. The course concerns mainly with solid dosage forms including powders, granules, tablets and capsules. The course also covers specific type of dosage forms: sterile pharmaceutical products which requires strict aseptic techniques to prevent contamination of the products from pathogens. The practical part provides the student with skills to prepare those dosage forms in the Pharmaceutics Lab.

هذا المقرر هو الجزء الثالث و الأخير من مقررات "الصيدلانيات" التي تهدف جميعها إلى تزويد الطالب بالمعرفة في دراسات ما قبل الصياغة ، و طرق صياغة وإعداد الأشكال الدوائية في المعمل أو مصنع الأدوية , و بركز المقرر الدراسي بشكل أساسي على الأشكال الدوائية الصلبة بما في ذلك المساحيق والحبيبات والأقراص والكبسولات, و يغطي المقرر أيضًا نوعًا خاصا من الأشكال الدوائية و هي المنتجات الصيدلانية المعقمة التي تتطلب تقنيات صارمة لمنع تلوث المنتجات بمسببات الأمراض, كما يزود الجزء العملي الطالب بالمهارات اللازمة لتحضير تلك الأشكال الدوائية في معمل الصيدلانيات.

XXV. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XXIV. Assignments:					
No	Assignments	Aligned CILOs	Week Due		
1	Individual: every student is assigned to present a search report supported with images on 5 trade names (commercial preparations) of the studied dosage forms	c4, c5, d2	7		
2	Group : every group is assigned to present an illustrating videos on lab. And industrial preparation of 3 types of studies dosage forms.	c4, c5, d1, d2, d3	12

X	XVI.Course Policies:
67.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
68.	Tardy: any student who is late for more than 15 minutes from starting the lecturewill not be allowed to attend the lecture and will be considered absent.
69.	Exam Attendance/Punctuality:
	any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.
70.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5	Cheating:
	Cheating by any means will cause the student failure and he/she must re-study the course
6	Plagiarism:
	Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

L: lecturing ; P: practical ; T.: training

II. Course Description:

This course is the Third and last part of "Pharmaceutics "courses which all are intended to provide the student with knowledge in preformulation, formulation and preparation of pharmaceutical dosage forms in small and large scales. The course concerns mainly with solid dosage forms including powders, granules, tablets and capsules. The course also covers specific type of dosage forms: sterile pharmaceutical products which requires strict aseptic techniques to prevent contamination of the products from pathogens. The practical part provides the student with skills to prepare those dosage forms in the Pharmaceutics Lab.

هذا المقرر هو الجزء الثالث و الأخير من مقررات "الصيدلانيات" التي تهدف جميعها إلى تزويد الطالب بالمعرفة في دراسات ما قبل الصياغة ، و طرق صياغة وإعداد الأشكال الدوائية في المعمل أو مصنع الأدوية , و بركز المقرر الدراسي بشكل أساسي على الأشكال الدوائية الصلبة بما في ذلك المساحيق والحبيبات والأقراص والكبسولات, و يغطي المقرر أيضًا نوعًا خاصا من الأشكال الدوائية و هي المنتجات الصيدلانية المعقمة التي تتطلب تقنيات صارمة لمنع تلوث المنتجات بمسببات الأمراض, كما يزود الجزء العملي الطالب بالمهارات اللازمة لتحضير تلك الأشكال الدوائية في معمل الصيدلانيات.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due		
1	Individual: every student is assigned to present a search report supported with images on 5 trade names (commercial preparations) of the studied dosage forms	c4, c5, d2	7		
2	Group : every group is assigned to present an illustrating videos on lab. And industrial preparation of 3 types of studies dosage forms.	c4, c5, d1, d2, d3	12

XII. Course Description:

The course is the second among (Pharmacology & Therapeutics) courses which all intend to provide the students with basic knowledge of the effect of human body on drugs and the mechanisms and influence of drugs on human body. The course covers the study of drugs affecting respiratory system, central nervous system and gastrointestinal tract. The course is co-requested with (Medicinal chemistry II) as both deals with the same drugs.

هذا المقرر الدراسي هي الثاني ضمن مقررات (علم الأدوية و التداوي) و التي تهدف جميعها إلى تزويد الطلاب بالمعرفة الأساسية لتأثير جسم الإنسان. يغطي هذا المقرر دراسة الأدوية على جسم الإنسان. يغطي هذا المقرر دراسة الأدوية التي تؤثر على الجهاز التنفسي والجهاز العصبي المركزي والجهاز الهضمي. يؤخذ هذا المقرر بالتزامن مع مقرر (الكيمياء الدوائية 2) حيث يركز كلاهما على نفس الأدوية.

XIV. Course Description:

The course examines the factors that influence medication pharmacokinetics and bioavailability, which can have a significant impact on the medicine's therapeutic efficacy. These aspects include biological factors such as anatomical/physiological, pathological, pharmacological factors such as physicochemical features of the medicine, roles of excipients contained, and dosage form type, as well as the impact of genetic variation and concurrent use of other drugs and foods. The course also covers basic biopharmaceutical information, such as in vitro, ex vivo, and in vivo correlation investigations.

يتناول المقرر العوامل التي تؤثر على الحرائك الدوائية والتوافر البيولوجي ، والتي يمكن أن يكون لها تأثير كبير على الفعالية العلاجية للأدوية . والمرضية ، والعقاقير مثل السمات الفيزيائية والكيميائية للأدوية ، وأدوار السواغات ، ونوع و شكل الجرعة ، بالإضافة إلى تأثير التباين الجيني والاستخدام المتزامن للأدوية والأطعمة الأخرى. يغطي المقرر الدراسي أيضًا المعلومات الصيدلانية الحيوية الأساسية ، مثل تحقيقات الارتباط في المختبر ، وخارج الجسم الحي ، وداخل الجسم الحي .

alignment to Program Intended learning outcomes (PILOs),
teaching strategies and assessment strategies

teac	eaching strategies and assessment strategies				
32	2. Alignment CILOs to PILOs				
No.	PILOs	CILOs			
Knowl	ledge and understanding	upon completion of the course, student will be able to:			
A1	Show understanding of fundamentals of biomedical sciences, physics, mathematics and chemistry and organization of human body	a1. Show understanding of the influence of human body structure including physiological/anatomical, pathological and genetic characters on drug pharmacokinetics and bioavailability.			
A3	Explain physicochemical properties of materials and products	a2. Explain the physicochemical properties of the drug, excipients dosage forms, co-administered drugs and food that affect drug pharmacokinetics and bioavailability.			
A8	Describe Biopharmaceutics and	a3. Describe the principles of biopharmaceutics and pharmacokinetics.			
	pharmacokinetics of medicines	a4. Explain the relationship of drug absorption, distribution and elimination to its bioavailability.			
		a5. Define biopharmaceutics, bioavailability and bioequivalence.a6. Describe the biopharmaceutical classification system (BCS) of drugs.			
A10	Describe the pharmacists role in different pharmacy practices.	a7. Describe the pharmacist role in assessment and improvement of drug bioavailability.			
Intelle	ctual skills upon completi	ion of the course, student will be able to:			
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret figures and graphs of biopharmaceutical studies.			
B2	Classify drugs, approaches and other information relevant	b2 .Classify drugs biopharmaceutically.

XXVII. Teaching strategies of the course:

Active lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, home works, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

KVI. Assignments:

XVI. Course Description:

This course deals with the role of pharmacist in the "community pharmacy" as providers of pharmaceutical care services, including dispensing of medication and counseling, to patients and as administrators of the pharmacy. The course also provides students the essential knowledge and skills in order to properly recommend safe and effective over the counter (OTC) medications to patients based on benefit: risk evaluation and also to promote drug safety in the community and avoid drug abuse/misuse. The practical part of the course will be conducted at the "Virtual pharmacy" at the faculty facility before training in the actual field at community pharmacies which will be at the end of the semester

يتناول هذا المقرر دور الصيدلي في "صيدليات المجتمع" كمقدم لخدمات الرعاية الصيدلانية، بما في ذلك صرف الأدوية وتقديم المشورة للمرضى وكمسؤول عن إدارة الصيدلية. يوفر المقرر أيضًا للطلاب المعرفة والمهارات الأساسية من أجل اختيار أدوية بدون وصفات للمرضى بشكل صحيح بأدوية آمنة وفعالة بناء على تقييمه لفوائد: مخاطر الدواء على المريض وأيضًا دوره في تعزيز سلامة الأدوية في المجتمع وتجنب أخطاء استخدام / إساءة استخدام الأدوية. الجزء العملي من المقرر سيتم في " الصيدلية الافتراضية" في الكلية و الذي ستوفر فرصة لاكتساب الطالب المهارة في صيدليات المجتمع قبل التدريب في "صيدليات المجتمع " في الحياة الواقعية و الذي سيبدأ في فترة الأجازة بعد انتهاء هذا الفصل

XXIX. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XVIII	XVIII. Assignments:					
No	Assignments	Aligned CILOs	Week Due

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:

XVIII. Course Description:

This course provide concerns with cosmetic preparations which is one of the newer disciplines in pharmacy education. The course is designed to provide knowledge and skills necessary for preparation of cosmetics used in cleaning, perfuming, making-up and cosmetics used as anti-wrinkles and for treatment of skin-pigmentation disorders other purposes. The practical part of the course provides with skills of preparation of cosmetics in pharmaceutics lab.

يهتم هذا المقرر بدراسة (مستحضرات التجميل) التي تعد من المجالات الحديثة غي مهنة الصيدلة و قد تم تصميم المقرر لتوفير المعرفة والمهارات اللازمة للطلاب في إعداد مستحضرات التجميل المستخدمة في التنظيف والتعطير والماكياج و أيضا المستخدمة في علاج التجاعيد و اضطرابات تصبغ الجلد و الأغراض أخرى. يوفر الجزء العملي من الدورة مهارات تحضير مستحضرات التجميل في معمل الصيدلانيات.

XL. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedq-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XXIX	(XIX. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual: every student is assigned to present a search report supported with images on 5 trade names (commercial preparations) of the studied cosmetic preparations	c4, c5, d2	4-13	3				
2	Group :every group is assigned to present an illustrating videos on lab. And industrial preparation of 3 types of cosmetic preparations	c4, c5, d1, d2, d3	14	2

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedq-back correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due	Mark		
1	Individual: every student is assigned to present a search report supported with images on 5 trade names (commercial preparations) of the studied cosmetic preparations	c4, c5, d2	4-13	3		
2	Group: every group is assigned to present an illustrating videos on lab. And industrial preparation of 3 types of cosmetic preparations	c4, c5, d1, d2, d3	14	2

XX. Course Description:

This course is the third one among (Medicinal chemistry) courses which are designed to provide knowledge and skills in chemistry of medicinal agents (drugs). It deals with the physicochemical properties, chemical synthesis, quantitative structure activity relationship (SAR), qualitative structure activity relationship (QSAR), pharmacophore molecules, mechanism of action, and metabolism of drugs used for cardiovascular system, blood and endocrine system disorders. Also there are practical part concerns with Pharmacopeial physicochemical properties, chemical , chromatographic or spectroscopy identification of some of those drugs.

هذا المقرر هوالثالث من بين مقررات (الكيمياء الدوائية) المصممة لتوفير المعرفة والمهارات في كيمياء الالمركبات الطبية (الأدوية). حيث يتعامل مع الخصائص الفيزيائية والكيميائية والتصنيع الكيميائي وعلاقة النشاط بالتركيب نوعيا (QSAR) والجزيئات المسؤولة عن آلية الدواء وآلية العمل واستقلاب الأدوية كل ذلك للأدوية المستخدمة في أمراض القلب والأوعية الدموية واضطرابات الدم وجهاز الغدد الصماء. هناك أيضًا جزء عملي يتعلق بمعرفة الخواص الفيزيائية والكيميائية للدواء ، والتعرف الكيميائي أو الكروماتوغرافي أو التحليل الطيفي لبعض أدوية القلب والشراين وامراض الغدد الصماء.

teaching strategies and assessment strategies							
5. A	5. Alignment CILOs to PILOs						
PILO	PILOs CILOs						
Knowle	dge and understanding: upon completion	of the course, students will be able to:					
A3	Explain physicochemical properties of materials and products	a1. Explain the correlation between the chemical and therapeutic properties of drugs to their molecular structure.					
A4	Describe analytical methods, principles, design and development techniques	a2. Explain the principles of synthesis, purification and metabolic reactions of drugs used for cardiovascular system, blood and endocrine disorders.					
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist in chemical synthesis of drugs.					
Intellec	tual skills: upon completion of the course,	students will be able to:					
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret the rules of structure-activity relationship to construct pharmacophore of drugs used for cardiovascular system, blood and endocrine disorders.					
		b2. Express molecular structure, synthesis and reactions of drugs with hand-drawing					
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b3. Classify, chemically, drugs affecting drugs used for cardiovascular system, blood and endocrine disorders.					
		b4 . Compare between chemically related drugs based on their chemical structure					
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b5. Design newer drugs used for cardiovascular system, blood and endocrine disorders.					
Professi	onal and practical skills: upon completion	of the course, students will be able to:					
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory

Knowle	dge and understanding: upon completion	of the course, students will be able to:				
A3	Explain physicochemical properties of materials and products	a1. Explain the correlation between the chemical and therapeutic properties of drugs to their molecular structure.				
A4	Describe analytical methods, principles, design and development techniques	a2. Explain the principles of synthesis, purification and metabolic reactions of drugs used for cardiovascular system, blood and endocrine disorders.				
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist in chemical synthesis of drugs.				
Intellect	tual skills: upon completion of the course,	students will be able to:				
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret the rules of structure-activity relationship to construct pharmacophore of drugs used for cardiovascular system, blood and endocrine disorders.				
		b2. Express molecular structure, synthesis and reactions of drugs with hand-drawing				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b3. Classify, chemically, drugs affecting drugs used for cardiovascular system, blood and endocrine disorders.				
		b4 . Compare between chemically related drugs based on their chemical structure				
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations	b5. Design newer drugs used for cardiovascular system, blood and endocrine disorders.				
Professi	onal and practical skills: upon completion	of the course, students will be able to:				
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory

C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory
C7	Conduct research and utilize the results in different pharmaceutical fields.	c3 .Search efficiently for information using documented and electronic sources of information.
		c4 Present and report his/her works correctly using appropriate writing rules and technologies media.
Transfe	rable skills: upon completion of the course	e, students will be able to:
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in team-activities.	d1. Communicate effectively and behave in discipline with colleagues.
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d2. Demonstrate the skills of time management and self-learning.
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d3. Participate efficiently with his colleagues in a team work.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or Concepts map: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing using the results in practical manner &for promoting team work skills

VI	VI. Assignments:						
No	Assignments	Aligned CILOs	Week Due

الجمهورية اليمنية وزارة التعليم العالي والبحث العلمي جامعة آزال للتنمية البشرية مركز التطوير وضمان الجودة كلية العلوم الطبية قسم الصيدلة برنامج بكالوريوس الصيدلة

Course Plan (Syllabus) of

PHARMACEUTICS IV

II. Course Description:

The course deals with the study of principles and techniques of advanced and novel drug delivery systems & dosage forms.

Azal University for Human Development

Development & Quality Assurance Center Faculty of Medical Science Dep. Of Pharmacy **Pharmacy Bachelor Program**

الجمهورية اليمنية وزارة التعليم العالى والبحث العا جامعة آزال للتنمية البشرية مركز التطوير وضمان الجودة كلية العلوم الطبية قسم الصيدلة برنامج بكالوريوس الصيدلة

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs).

	teaching strategies and assessment strategies				
1. <i>A</i>	1. Alignment CILOs to PILOs				
No.	PILOs	CILOs			
1.	A2	a1. Explicit the general properties, advantages and disadvantages of advanced and novel drug delivery systems & dosage forms.			
2.	A3	a2 . Discuss the principles, pharmacopeial requirements, methods of preparation, of various types of advanced and novel drug delivery systems & dosage forms			
3.		a3 . Explicit the types and roles of excipients included in different types of advanced and novel drug delivery systems & dosage forms			
4.	A4	a4. Comprehend his/her role as pharmacist in formulation of pharmaceutical dosage forms.			
5.	B1	b1. Calculate the amount of ingredient required to prepare an enlarged or reduced amount of a pharmaceutical formula.			
6.	B2	b2 .Categorize advanced and novel drug delivery systems & dosage forms.			
7.		b3. Compare between various types of advanced and novel drug delivery systems & dosage forms.			
8.	В3	b4. Relate the selection of excipients and the method of preparation advanced and novel drug delivery systems & dosage forms to formulation, compatibility and stability factors.			
9.		b5. Formulate the active ingredient and excipients into an appropriate advanced and novel drug delivery systems & dosage forms			
10.	B4	b6 . Assess the quality of the prepared advanced and novel drug delivery systems & dosage forms.			
11.	C1	c1. Handle efficiently the tools and chemicals used in pharmaceutics Lab.			
12.		c2. Operate successfully the instruments used in pharmaceutics Lab.			
13.	C2	c3. Prepare successfully pharmaceutical solid dosage forms including tablets and capsules and sterile pharmaceutical dosage forms using standard procedures.			
14.	C3	c4 .Take the required safety criteria during preparation pharmaceutical

V. Teaching strategies of the course:

Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:							
No	Assignments	Aligned CILOs	Week Due	Mark				
1	Individual : every student is assigned to provide a summary of one of the studied topics.	c3, c4,	4-13	6				
2	Group: each group of students will be assigned to provide a search-based report of one novel drug delivery systems	c3, c4, d1, d3,	14	4

IX. Course Description:

This course provides the students in the first part with basic knowledge and skills necessary to carry out pharmacoeconomics analysis in order to select a drug product or therapy among other ones by comparing their cost and outcomes. The course deals with the knowledge of students with best method for analysis that may be used for select the suitable method of therapy or suitable economic method for purchase. The second part of the course deals with methodologies and concepts of (Pharmacoepidemology) which is study of the uses and effects of drugs in well-defined populations. The course also provides a link of pharmacoepidemology to Pharmacovigillance which is assessment, detection and monitoring of adverse effects of drugs in the market.

يزود هذا المقرر الطلاب بالمعرفة والمهارات الأساسية اللازمة لإجراء تحليل اقتصاديات الدواء من أجل اختيار منتج دوائي أو علاج من بين المنتجات الأخرى من خلال مقارنة التكلفة والنتائج. بيرتبط هذا المقرر بمعرفة الطلاب بأفضل طريقة للتحليل يمكن استخدامها لتحديد طريقة المعالمية أو الطريقة الاقتصادية المناسبة للشراء.. يتناول الجزء الثاني من المقرر الدراسي منهجيات ومفاهيم (فار ماكويبيمولوجيا) وهي دراسة استخدامات وتأثيرات الأدوية في مجموعات سكانية محددة جيدًا. توفر الدورة أيضًا رابطًا بين علم الأوبئة الدوائية والمراقبة الدوائية والتي تتمثل في تقييم واكتشاف ورصد الآثار الضارة للأدوية في السوق.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teaching strategies and assessment strategies							
40. Alignment CILOs to PILOs							
PILO	S	CILOs					
Knowledge and understanding: upon completion of the course, students will be able to:							
A4	Describe analytical methods, principles, design and development techniques	a1. Describe the analysis methods of Pharmacoeconomics, pharmacoepidemology and Pharmacovigillance					
A9	Define the basis of health policy, Pharmacoeconomics, pharmacoepidemology, pharmaceutical marketing and administration.	a2. Define the basis of pharmacoeconomics, Pharmacoeconomics, pharmacoepidemology and Pharmacovigillance					
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacists to evaluate drug products and therapies using pharmacoeconomical and pharmacoepidemological methods					
Intellect	ual skills: upon completion of the course, studen	ts will be able to:					
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret outcome data of pharmacoeconomic and pharmacoepidemology analysis.					
В8	Use appropriate research methods including experimental, observational and electronic to collect data and solve problems.	b2 . Apply pharmacoeconomic and pharmacoepidemological calculations to evaluate drug products or therapies.					
Professi	onal and practical skills: upon completion of the	course, students will be able to:					
C6	Apply administrative and Pharmacoeconomics rules in pharmacy and ethically use marketing skills for drug promotion.	c2 . Apply rules of pharmacoeconomics and pharmacoepidemology rules in pharmacy practice.					
Transfe	rable skills: upon completion of the course, stude	ents will be able to:					
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d1. Demonstrate skills of time management, problem-solving and decision making.					
D4	Take the responsibility for adaption to change needs in pharmacy practice.	d2. Take responsibility of adaptation to changes need in pharmacy practice.

II. Course Description:

This course provides the students in the first part with basic knowledge and skills necessary to carry out pharmacoeconomics analysis in order to select a drug product or therapy among other ones by comparing their cost and outcomes. The course deals with the knowledge of students with best method for analysis that may be used for select the suitable method of therapy or suitable economic method for purchase. The second part of the course deals with methodologies and concepts of (Pharmacoepidemology) which is study of the uses and effects of drugs in well-defined populations. The course also provides a link of pharmacoepidemology to Pharmacovigillance which is assessment, detection and monitoring of adverse effects of drugs in the market.

يزود هذا المقرر الطلاب بالمعرفة والمهارات الأساسية اللازمة لإجراء تحليل اقتصاديات الدواء من أجل اختيار منتج دوائي أو علاج من بين المنتجات الأخرى من خلال مقارنة التكلفة والنتائج. يرتبط هذا المقرر بمعرفة الطلاب بأفضل طريقة للتحليل يمكن استخدامها لتحديد طريقة العلاج المناسبة أو الطريقة الاقتصادية المناسبة للشراء.. يتناول الجزء الثاني من المقرر الدراسي منهجيات ومفاهيم (فارماكويبيمولوجيا) وهي دراسة استخدامات وتأثيرات الأدوية في مجموعات سكانية محددة جيدًا. توفر الدورة أيضًا رابطًا بين علم الأوبئة الدوائية والمراقبة الدوائية والتي تتمثل في تقييم واكتشاف ورصد الآثار الضارة للأدوية في السوق.

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

	teaching strategies and assessment strategies					
	1. Alignment CILOs to PILOs					
PILO		CILOs				
Knowle	dge and understanding: upon completion of the c	course, students will be able to:				
A4	Describe analytical methods, principles, design and development techniques	a1. Describe the analysis methods of Pharmacoeconomics, pharmacoepidemology and Pharmacovigillance				
A9	Define the basis of health policy, Pharmacoeconomics, pharmacoepidemology, pharmaceutical marketing and administration.	a2. Define the basis of pharmacoeconomics, Pharmacoeconomics, pharmacoepidemology and Pharmacovigillance				
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacists to evaluate drug products and therapies using pharmacoeconomical and pharmacoepidemological methods				
Intellec	tual skills: upon completion of the course, studen	ts will be able to:				
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret outcome data of pharmacoeconomic and pharmacoepidemology analysis.				
В8	Use appropriate research methods including experimental, observational and electronic to collect data and solve problems.	b2 . Apply pharmacoeconomic and pharmacoepidemological calculations to evaluate drug products or therapies.				
Professi	onal and practical skills: upon completion of the	course, students will be able to:				
C6	Apply administrative and Pharmacoeconomics rules in pharmacy and ethically use marketing skills for drug promotion.	c2 . Apply rules of pharmacoeconomics and pharmacoepidemology rules in pharmacy practice.				
Transfe	rable skills: upon completion of the course, stude	ents will be able to:				
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d1. Demonstrate skills of time management, problem-solving and decision making.				
D4	Take the responsibility for adaption to change needs in pharmacy practice.	d2. Take responsibility of adaptation to changes need in pharmacy practice.

XXIV. Course Description:

This course also as the previous courses (pharmacology & therapeutics I II) deals with the study of pharmacodynamics (mechanism of action, therapeutic effect, adverse effects) and pharmacokinetics (absorption, distribution, metabolism, execration) of drugs that used for treatment of Cardiovascular System, blood and endocrine disorders.

يتناول هذا المقرر الدراسي أيضًا كالمقررات السابقة (علم الأدوية والتداوي III) دراسة الديناميكيات الدوائية (آلية العمل، والأثار العلاجية، والأثار السلبية) والحركية الدوائية (الامتصاص، والتوزيع، والتمثيل الغذائي، والإخراج) للأدوية المستخدمة في علاج أمراض القلب والأوعية الدموية و الدم والغدد الصماء.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due		
1	Individual: every student is assigned to solve a list of problems related to advising healthcare of medicines use based comparison of drug benefits and risks for specific patients e.g. CVS patients, renal failure patients, etc.	b1, c1, d1	6-12		

	VII. Schedule of Assessment Tasks for Students During the Semester

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

V	VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due			
1	Individual: every student is assigned to solve a list of problems related to advising healthcare of medicines use based comparison of drug benefits and risks for specific patients e.g. CVS patients, renal failure patients, etc.	b1, c1, d1	6-12			

	VII. Schedule of Assessment Tasks for Students During the Semester					
No.	Assess	ment Method	Week Due	Mark	Proportion of Total course Assessment	Aligned Course Learning Outcomes (CILOs)
	Term	Quizzes	4-13, 14	10	10	b2
1	Works	Assignments	7, 12	10	10	b1, c1, d1
2	Mid-semeste exam)	er exam (written	7	20	20	a1, a2, a3, b1
3	Final exam (written exam)	16	60	60	a1, a2, a3, b1

XXVI. Course Description:

Phytochemistry (I & II) courses are complement—to the courses of (Pharmacognosy(I & II) as all deal with the plants as sources of drug and all are basis of evidence-based phytotherapy which is a significant part of complementary and alternative Medicine . Phytochemistry) I)course provide the student with knowledge and skills—classification, extraction, isolation and the identification of the active chemical constituents (phytochemicals) present in the medicinal plants. This course concerns with 2 essential groups of phytochemicals: alkaloids, terpenoids while other phytochemicals will be covered in the next semester in (Phytochemistry II) course.

تعتبر مقررات كيمياء العقاقير (1و 2) مكملة لمقررات (علم العقاقير 1 و 2) حيث تهتم جميعها بالنباتات كأحد مصادر الأدوية وجميعها تشكل ركيزة علمية مبنية على الأدلة للتداوي بالأعشاب والذي يعد جزءًا هاما من الطب التكميلي والبديل. يزود مقرر كيمياء العقاقير 1 الطالب بالمعرفة والمهارات في تصنيف واستخلاص وعزل و الكشف عن المركبات الفعالة الموجودة في النباتات الطبية. يهتم هذا المقرر بمجموعتين أساسيتين من تلك المركبات: القلويدات و مركبات التربينويد بينما سيتم تغطية بقية المركبات الفعالة في مقرر كيمياء العقاقير 2

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teach	teaching strategies and assessment strategies			
42.	Alignment CILOs to PILOs			
PILO	PILOs CILOs			
Knowle	dge and understanding: upon completion			
A3	Explain physicochemical properties of materials and products	a1. Explain the physicochemical properties of alkaloids and terpenoids phytochemicals.		
A4	Describe analytical methods, principles, design and development techniques	a2 . Discuss the methods and techniques used to extract and isolate phytochemicals		
A6	Explain the basis of complementary and alternative medicines	a3. Define the botanical sources and therapeutic uses of alkaloids and terpenoids phytochemicals.		
A10	Describe the pharmacists role in different pharmacy practices.	a4. Describe the role of pharmacist in extraction, isolation and identification of phytochemicals.		
Intellec	tual skills: upon completion of the course	e, students will be able to:		
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Express the chemical structure of phytochemicals using drawings.		
		b2. Differentiate between various types of alkaloids and terpenoids.		
B2	Classify drugs, approaches and other	b3 . Classify alkaloids and terpenoids.		
	information relevant to pharmacy based on scientific classification system.	b4. Compare between different types of alkaloids and terpenoids		
B4	Select appropriate standard operation procedures to conduct qualitative and quantitative analysis.	b5. Select standard operation procedure to extract, isolate and identify alkaloids and terpenoids in a plant sample		
Professi	ional and practical skills: upon completion	on of the course, students will be able to:		
C1	Handle safely the chemicals, biological samples and pharmaceutical	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory		
	ingredients and products.	c2. Operate the instruments and perform experiments successfully in the laboratory		
С3	Screen for drugs from different sources and carry out pharmacy relevant	c3. Screen for alkalaoid and terpenoid drugs from plant sources.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due	Mark		
1	Individual: each student will be assigned solve the problems provided by the teacher. The problems involve nomenclature, isolation, chemical reaction, etc.	c4, c5, d2	4-13	3		
2	Group: each group of students will be assigned to present 2-3 videos or simulations of one of the studied extraction, isolation techniques.	c4, c5, d1, d2, d3	14	2

17	Date of Approval						

L: lecturing; P: practical; T.: training

II. Course Description:

This course is complementary to (Biopharmaceutics and Pharmacokinetics I) course and both provide knowledge in drug pharmacokinetics and bioavailability. However, this course provides the student with the knowledge and skills required to use data, obtained from pharmacokinetic/biopharmaceutical studies, for mathematical calculations of drug concentrations in body and the rate and extent of drug absorption, distribution, elimination and drug dose required to achieve therapeutic concentration

هذه المقرر مكمل للمقرر السابق (الصيدلة الحيوية وحركية الدواء 1) ويوفر كلاهما المعرفة في الحركة الدوائية والتوافر الحيوي للدواء. يزود هذا المقرر الطالب بالمعرفة والمهارات اللازمة لاستخدام البيانات ، التي تم الحصول عليها من دراسات الحركة الدوائية / الصيدلانية الحيوية ، لحساب تراكيز الدواء في الجسم و التوافر الحيوي للدواء و سرعة كمية امتصاص و توزيع و استقلاب و اخراج الدواء و حساب الجرعات الدوائية للوصول الى التركيز العلاجي

Course Description:

This course is complementary to (Biopharmaceutics and Pharmacokinetics I) course and both provide knowledge in drug pharmacokinetics and bioavailability. However, this course provides the student with the knowledge and skills required to use data, from pharmacokinetic/biopharmaceutical studies, obtained for mathematical calculations of drug concentrations in body and the rate and extent of drug absorption, distribution, elimination and drug dose required to achieve therapeutic concentration هذه المقرر مكمل للمقرر السابق (الصيدلة الحيوية وحركية الدواء 1) ويوفر كلاهما المعرفة في الحركة الدوائية والتوافر الحيوي للدواء. يزود هذا المقرر الطالب بالمعرفة والمهارات اللازمة لاستخدام البيانات ، التي تم الحصول عليها من دراسات الحركة الدوائية / الصيدلانية الحيوية ، لحساب تراكيز الدواء في الجسم و التوافر الحيوي للدواء و سرعة كمية امتصاص و توزيع و استقلاب و اخراج الدواء و حساب الجرعات الدوائية للوصول الى التركيز العلاجي

IX	Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecture will not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality: any student who is late for more than 30 minutes from starting the exam will not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5.	Cheating: Cheating by any means will cause the student failure and he/she must re-study the course
6.	Plagiarism: Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

XXIX. Course Description:

This course provides the students with essential knowledge and skills necessary to effectively and ethically perform missions of hospital pharmacist in healthcare facilities. The missions include, for instance, affording pharmaceutical care services to in-patient and out-patients, management of the hospital pharmacy, medical stores and medical supply administration, participation in the drug and therapeutics committee and education of patients and healthcare professionals in rational use of medications. The course is co-requisite with (Pharmacy II) training that involve visits to a local hospital der in order to link the theoretical aspects of the course to actual-field practice.

يزود هذا المقرر الطلاب بالمعرفة والمهارات الأساسية اللازمة لأداء مهام صيدلي المستشفى بشكل فعال وأخلاقي في مرافق الرعاية الصحية. تشمل المهام ، على سبيل المثال ، تقديم خدمات الرعاية الصيدلانية للمرضى الداخليين والخارجيين ، وإدارة صيدلية المستشفى ، والمخازن الطبية وإدارة الإمدادات الطبية ، والمشاركة في لجنة الأدوية والعلاجات ، وتثقيف المرضى والمتخصصين في الرعاية الصحية في الاستخدام الرشيد من الأدوية. تعد الدورة التدريبية متطلبًا مشتركًا مع تدريب الصيدلة-2الذي يتضمن زيارات إلى أحد المستشفيات المحلية من أجل ربط الجوانب النظرية للدورة التدريبية بالممارسة الميدانية الفعلية.

XLVI. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficienc4 of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

XLIII. Assignments:									
No	Assignments	Aligned CILOs	Week Due	Mark					
1	Individual: every student is assigned to execute the following homework tasks 1- Review and evaluate patient1s medication record 2- Solve problems related to hospital practice The teacher provide the student with those records and problems	b2, b3, d1, d3	4-13	10

11	Date of Approval							

II. Course Description:

This course provides the students with essential knowledge and skills necessary to effectively and ethically perform missions of hospital pharmacist in healthcare facilities. The missions include, for instance, affording pharmaceutical care services to inpatient and out-patients, management of the hospital pharmacy, medical stores and medical supply administration, participation in the drug and therapeutics committee and education of patients and healthcare professionals in rational use of medications. The course is co-requisite with (Pharmacy II) training that involve visits to a local hospital der in order to link the theoretical aspects of the course to actual-field practice.

يزود هذا المقرر الطلاب بالمعرفة والمهارات الأساسية اللازمة لأداء مهام صيدلي المستشفى بشكل فعال وأخلاقي في مرافق الرعاية الصحية. تشمل المهام ، على سبيل المثال ، تقديم خدمات الرعاية الصيدلانية للمرضى الداخليين والخارجيين ، وإدارة صيدلية المستشفى ، والمخازن الطبية وإدارة الإمدادات الطبية ، والمشاركة في لجنة الأدوية والعلاجات ، وتثقيف المرضى والمتخصصين في الرعاية الصحية في الاستخدام الرشيد من الأدوية. تعد الدورة التدريبية متطلبًا مشتركًا مع تدريب الصيدلة-2الذي يتضمن زيارات إلى أحد المستشفيات المحلية من أجل ربط الجوانب النظرية للدورة التدريبية بالممارسة الميدانية الفعلية.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficienc4 of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

VI	VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due	Mark		
1	Individual: every student is assigned to execute the following homework tasks 1- Review and evaluate patient1s medication record 2- Solve problems related to hospital practice The teacher provide the student with those records and problems	b2, b3, d1, d3	4-13	10

XXXI. Course Description:

This course is the fourth one among (Medicinal chemistry) courses which are designed to provide knowledge and skills in chemistry of medicinal agents (drugs). It deals with the physicochemical properties, chemical synthesis, quantitative structure activity relationship (SAR), qualitative structure activity relationship (QSAR), pharmacophore molecules, mechanism of action, and metabolism of drugs used for infections and cancer. Also there are practical part concerns with Pharmacopeial physicochemical properties, chemical, chromatographic or spectroscopy identification of some drugs used for infections and cancer.

LVIII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

XIV	XIV. Assignments:

XLIX. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:						
No	Assignments	Aligned CILOs	Week Due				
1	Group: each group of students will be assigned to hypothetically design newer drugs form a studied patent drug using SAR principles	b5, c3, c4, d1, d3	8

XXXIII. Course Description:

This course also as the previous courses (pharmacology & therapeutics I II, III) deals with the study of pharmacodynamics (mechanism of action, therapeutic effect, adverse effects) and pharmacokinetics (absorption, distribution, metabolism, execration) of drugs that used and affecting infections and cancer. The practical part provides the skills to handle experimental animals and test actions of certain drugs on them

يتناول هذا المقرر الدراسي أيضًا كالمقررات السابقة (علم الأدوية والعلاجيات الأول والثاني والثالث) دراسة الديناميكيات الدوائية (آلية العمل ، والأثر العلاجي ، والآثار الضارة) والحركية الدوائية (الامتصاص ، والتوزيع ، والتمثيل الغذائي ، والإخراج) للأدوية المستخدمة لعلاج العدوى والسرطان. يوفر الجزء العملي للطالب مهارة التعامل مع حيوانات التجارب و اختبار بعض الأدوية عليها

XXXV. Course Description:

This course is complementary to (phytochemistry I) course and both courses together with Pharmacognosy courses comprise the basis of phytotherapy as a part of complementary and alternative medicines . This course provides the students with study and knowledge of chemical structures extraction , isolation and identifications of phytochemicals present in medicinal plants including : phenyl propane derivatives, volatile oils, glycosides , tannins and others e.g. bitter principles .

يعتبر هذا المقرر مكمل لمقرر (كيمياء العقاقير 1) ويشكل كلا المقررين مع مقررات علم العقاقير 1و 2 أسسَ التداوي بالأعشاب كَجزء من الطب المكمل و البديل . يزود هذا المقرر الطلاب بالمعرفة بالتركيب الكيميائي للمركبات النباتية وطريقة إستخراجها وعزلها والتعرف على المواد الكيميائية النباتية الموجودة في النباتات الطبية بما في ذلك : مشتقات فينيل بروبان والزيوت المتطايرة والجليكوزيدات والعفص وغيرها .

II. Course Description:

This course is complementary to (phytochemistry I) course and both courses together with Pharmacognosy courses comprise the basis of phytotherapy as a part of complementary and alternative medicines . This course provides the students with study and knowledge of chemical structures extraction , isolation and identifications of phytochemicals present in medicinal plants including : phenyl propane derivatives, volatile oils, glycosides , tannins and others e.g. bitter principles .

يعتبر هذا المقرر مكمل لمقرر (كيمياء العقاقير 1) ويشكل كلا المقررين مع مقررات علم العقاقير 1و 2 أسس التداوي بالأعشاب كجزء من الطب المكمل و البديل . يزود هذا المقرر الطلاب بالمعرفة بالتركيب الكيميائي للمركبات النباتية وطريقة استخراجها وعزلها والتعرف على المواد الكيميائية النباتية الموجودة في النباتات الطبية بما في ذلك : مشتقات فينيل بروبان والزيوت المتطايرة والجليكوزيدات والعفص وغيرها

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs),

teach	teaching strategies and assessment strategies					
1.	1. Alignment CILOs to PILOs					
PILO		CILOs				
Knowle	edge and understanding: upon completion of	the course, students will be able to:				
A3	Explain physicochemical properties of materials and products	a1. Explain the physicochemical properties of phenyl propane derivatives, volatile oils, glycosides, tannins and present in medicinal plant.				
A4	Describe analytical methods, principles, design and development techniques	a2 . Discuss the methods and techniques used to extract and isolate phenyl propane derivatives, volatile oils, glycosides tannins and bitter constituents present from medicinal plant.				
A6	Explain the basis of complementary and alternative medicines	a3. Define the botanical sources and therapeutic uses of phenyl propane derivatives, volatile oils, glycosides, tannins present in medicinal plant.				
A10	Describe the pharmacists role in different pharmacy practices.	a4. Describe the role of pharmacist in extraction, isolation and identification of phytochemicals.				
Intellec	tual skills: upon completion of the course, stu	idents will be able to:				
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Express the chemical structure of phytochemicals using drawings.				
		b2. Differentiate between various types of phenyl propane derivatives, volatile oils, glycosides, tannins and others e.g. bitter principles.				
B2	Classify drugs, approaches and other information relevant to pharmacy based on scientific classification system.	b3 . Classify phenyl propane derivatives, volatile oils, glycosides , tannins and others e.g. bitter principles				
		b4. Compare between different types of phenyl propane derivatives, volatile oils, glycosides, tannins and others e.g. bitter principles.

Dep. Of Pharmacy
Pharmacy Bachelor Program

B4	Select appropriate standard operation procedures to conduct qualitative and quantitative analysis.	b5. Select standard operation procedure to extract, isolate and identify phenyl propane derivatives, volatile oils, glycosides, tanning and others e.g. bitter principles from a plant sample	
Professi	onal and practical skills: upon completion of	the course, students will be able to:	
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	 c1. Handle efficiently and safely the chemical materials and tools used in the laboratory c2. Operate the instruments and perform experiments successfully in the laboratory 	
С3	Screen for drugs from different sources and carry out pharmacy relevant experiments successfully.	c3. Screen for alkalaoid and terpenoid drugs	
C7	Conduct research and utilize the results in different pharmaceutical fields.	c4 . Search efficiently for information using documented and electronic sources of information.	
		c5. Present and report his/her works correctly using appropriate writing rules and technologies media.	
Transfe	rable skills: upon completion of the course, s	tudents will be able to:	
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in team-activities.	d1. Communicate effectively and behave in discipline with colleagues.	
D2	Develop and demonstrate skills of time managements, self-learning and decision making.	d2. Demonstrate the skills of time management and self-learning.	
D3	Participate collaboratively in team work with colleagues and healthcare professionals.	d3. Participate efficiently with his colleagues in a team work.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or Concepts map: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using learning aids such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing using the results in practical manner & for promoting team work skills

VI	VI. Assignments:					
No	Assignments	Aligned CILOs	Week Due	Mark		
1	Individual: each student will be assigned solve the problems provided by the teacher. The problems involve nomenclature, isolation, chemical reaction, etc.	c4, c5, d2	4-13	3		
2	Group : each group of students will be assigned to present 2-3 videos or	c4, c5, d1, d2, d3	14	2

IX	. Course Policies:
1.	Class Attendance: At least 75 % of the course hours should be attended by the student. Otherwise, he/she will not be allowed to attend the final exam
2.	Tardy: any student who is late for more than 15 minutes from starting the lecturewill not be allowed to attend the lecture and will be considered absent.
3.	Exam Attendance/Punctuality:
	any student who is late for more than 30 minutes from starting the examwill not be allowed to attend the exam and will be considered absent.
4.	Assignments & Projects: Assignments and projects will be assessed individually unless the teacher request for group work
5.	Cheating:
	Cheating by any means will cause the student failure and he/she must re-study the course
6.	Plagiarism:
	Plagiarism by any means will cause the student failure in the course. Other disciplinary procedures will be according to the college rules.

Course Description: II.

This course deals with the study of sources, mode of action, toxic pathophysiological effects, detection, diagnosis and management of poisonous materials including acids, alkalis, metals, metalloids, pesticides, heavy metals, specific chemicals, simple organic compounds, poisoning with materials killing harmful Living organisms and some highly toxic medicines

يتناول هذا المقرر در اسة مصادر ، و اليات التأثير السام ، والتأثير ات المرضية السامة ، و طرق كشف وتشخيص و معالجة المواد السامة و تشمل: الأحماض والقلويات والمبيدات الحشرية والمعادن الثقيلة والمواد الكيميائية الأخرى كالمركبات العضوية البسيطة و مبيدات الكائنات الحية الضارة و بعض الأدوية عالية السمية

II. Course Description:

This course, in its first part, provide students with knowledge in the evidence-based applications of herbal medicines and other natural types as complementary and/or alternative methods for classical Medicine for treatment of human diseases. It helps the students to utilize their knowledge and skills attained from previous courses of (Pharmacognosy I, II and phytochemistry I, II) to achieve that purpose. The second part of the course deals with the techniques and approaches employed to screen active ingredients from plants and other natural sources and to evaluate the specifications of natural products.

يزود هذا المقرر في جزئه الأول ، الطلاب بالمعرفة في التطبيقات القائمة على الأدلة للأدوية العشبية والأنواع الطبيعية الأُخرى كطرق تكميلية و / أو بديلة للطب الكلاسيكي لعلاج الأمراض التي تصيب الإنسان. يساعد الطلاب على الاستفادة من معارفهم ومهاراتهم

II. Course Description:

This course, in its first part, provide students with knowledge in the evidence-based applications of herbal medicines and other natural types as complementary and/or alternative methods for classical Medicine for treatment of human diseases. It helps the students to utilize their knowledge and skills attained from previous courses of (Pharmacognosy I, II and phytochemistry I, II) to achieve that purpose. The second part of the course deals with the techniques and approaches employed to screen active ingredients from plants and other natural sources and to evaluate the specifications of natural products.

يزود هذا المقرر في جزئه الأول ، الطلاب بالمعرفة في التطبيقات القائمة على الأدلة للأدوية العشبية والأنواع الطبيعية الأخرى كطرق تكميلية و / أو بديلة للطب الكلاسيكي لعلاج الأمراض التي تصيب الإنسان. يساعد الطلاب على الاستفادة من معارفهم ومهاراتهم المكتسبة من المقررات السابقة (علم العقاقير العام 1و 2 و كيمياء العقاقير 1 و2) لتحقيق هذا الغرض. يتناول الجزء الثاني من المقرر التقنيات والأساليب المستخدمة لفحص المكونات النشطة من النباتات والمصادر الطبيعية الأخرى ولتقييم مواصفات المنتجات الطبيعية.

٧. **Teaching strategies of the course:**

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or Concepts map: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using learning aids such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing using the results in practical manner &for promoting team work skills

XXXIX. Course Description:

This course is designed to provide the student with essential knowledge and skills necessary to provide pharmaceutical clinical patient-oriented services to patients, in general, and in particular to specific populations of patients including pregnant, pediatric, lactating and geriatric patients. The course is preceded by courses necessary to help the student to evaluate patient case and select safe and effective drugs for them. These course are (pharmacology I, II, III and IV) and (Biopharmaceutics and pharmacokinetics I,II) which concern with pharmacodynamic and pharmacokinetics of drugs, respectively.

تم تصميم هذه المقرر لتزويد الطالب بالمعرفة والمهارات الأساسية اللازمة لتقديم الخدمات الصيدلانية السريرية الموجهة للمرضى بشكل عام ، وعلى وجه الخصوص لمجموعات محددة من المرضى بما في ذلك المرضى الحوامل والأطفال والمرضعات وكبار السن. يسبق هذا المقرر مقررات ضرورية لمساعدة الطالب على تقييم حالة المريض واختيار الأدوية الأمنة والفعالة له. هذه المقررات هي (علم الأدوية 1,2,3,4) و (الصيدلة الحيوية والحركية الدوائية الدوائية (2,1 التي تختص بالديناميكا الدوائية والحركية الدوائية على التوالي.

II. Course Description:

This course is designed to provide the student with essential knowledge and skills necessary to provide pharmaceutical clinical patient-oriented services to patients, in general, and in particular to specific populations of patients including pregnant, pediatric, lactating and geriatric patients. The course is preceded by courses necessary to help the student to evaluate patient case and select safe and effective drugs for them. These course are (pharmacology I, II, III and IV) and (Biopharmaceutics and pharmacokinetics I,II) which concern with pharmacodynamic and pharmacokinetics of drugs, respectively.

تم تصميم هذه المقرر لتزويد الطالب بالمعرفة والمهارات الأساسية اللازمة لتقديم الخدمات الصيدلانية السريرية الموجهة للمرضى بشكل عام ، وعلى وجه الخصوص لمجموعات محددة من المرضى بما في ذلك المرضى الحوامل والأطفال والمرضعات وكبار السن. يسبق هذا المقرر مقررات ضرورية لمساعدة الطالب على تقييم حالة المريض واختيار الأدوية الأمنة والفعالة له. هذه المقررات هي (علم الأدوية 1,2,3,4) و (الصيدلة الحيوية والحركية الدوائية الدوائية (2,1 التي تختص بالديناميكا الدوائية والحركية الدوائية على التوالي.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or Concepts map: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using learning aids such as Data show projector

Feed-back learning (Seminar): Each group of students will be assigned to solve a number of case studies prepared by the teacher

Assignments

At the specified time due, group(s) of students will be assigned by the teacher to present a seminar about one topic. The seminar include power point presentation followed by discussion and questions from the teacher and other students

XLI. Course Description:

This course deals with the study of criteria of good practices relevant to manufacturing of medications in drug plants . These criteria include current good manufacturing practice (cGMP) , good storage practice (cGSP) and good laboratory practice (cGLP) that are based on global guidelines such as ICH, WHO and ISO. The course also concerns with and the substantial unit operations utilized during manufacturing of these products including those involved in transfer of materials, those applied prior and after mixing of ingredients and those employed in filling and packaging of finished products. with a products and those employed in filling and packaging of finished products. It is a product with a product of the produc

II. Course Description:

This course deals with the study of criteria of good practices relevant to manufacturing of medications in drug plants . These criteria include current good manufacturing practice (cGMP) , good storage practice (cGSP) and good laboratory practice (cGLP) that are based on global guidelines such as ICH, WHO and ISO. The course also concerns with and the substantial unit operations utilized during manufacturing of these products including those involved in transfer of materials, those applied prior and after mixing of ingredients and those employed in filling and packaging of finished products. with and those employed in filling and packaging of finished products. Lipade with last particular lipade with last particular lipade (cGSP) enanctually (cGMP) enanctually (cGMP) enanctually (cGMP) enanctually (cGMP) enanctually (cGMP) enanctually (cGCP) lipade l

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teaching strategies and assessment strategies						
1. Alignment CILOs to PILOs						
PILO	PILOs CILOs					
Knowle	Knowledge and understanding: upon completion of the course, students will be able to:					
A4	Describe analytical methods, principles, design and development techniques a1. Identify criteria for good practice pharmaceutical manufacturing including cGMP, cGSP, cGLP based WHO and ISO guidelines. a2. Describe the different types unitmethods used for pharmaceutical manufacturing and their advantages/disadvantages					
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacist in employment GMP criteria and to operate unit operations for manufacturing of drug products.				
Intellec	tual skills: upon completion of the course, s					
В3	Design an evaluate different types of safe and effective drugs , pharmaceutical dosage forms and cosmetic preparations					
Professi	ional and practical skills: upon completion	of the course, students will be able to:				
C7	Conduct research and utilize the results in different pharmaceutical fields.	c1 .Search efficiently for information using documented and electronic sources of information.				
	c2. Present and report his/her works correct using appropriate writing rules a technologies media.					
Transfe	erable skills: upon completion of the course,	students will be able to:				
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in team-activities.	disciplines with colleagues, and healthcare professionals				
D2	Develop and demonstrate skills of time managements, self-learning and decision	d2. Demonstrate the skills of time management and self-learning.

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:						
No	Assignments	Aligned CILOs	Week Due				
1	Group: The teacher will provide the students with a number of problems related to operation and production studied in this course. The student group is assigned to provide a search-based technical solutions of one of those problems	c1, c2, d1, d2, d3	5-12

V. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

VI	VI. Assignments:

XLV. Course Description:

This course provides the students with the knowledge and ability to control the quality of drugs and other medical substances by the study of quality tests and knowledge of allowed limits in pharmacopeia. Also, this course deals with the study of the quality management, requirements, procedures as well as pharmacopeial tests to evaluate the quality of raw materials, in-process products and finished pharmaceutical products and QC tests of raw finished products, package and labels.

The practical part of the course provides with skills of quality control of drugs that done in pharmaceutical instrumental analysis and pharmaceutics lab.

يزود هذا المقرر الطلاب بالمعرفة والقدرة على معرفة جودة الأدوية والمواد الطبية الأخرى من خلال دراسة اختبارات الجودة والحدود المسموح بها في دساتير الأدوية. كما ، يتناول هذا المقرر دراسة إدارة الجودة والمتطلبات والإجراءات وكذلك الاختبارات الصيدلانية لتقييم جودة المواد الخام والمنتجات التي تكون قيد المعالجة والمنتجات الصيدلانية الجاهزة واختبارات مراقبة الجودة للمنتجات النهائية النهائية والعبوات والملصقات و يوفر الجزء العملي من المقرر مهارات مراقبة جودة الأدوية ويتم ذلك في مختبر التحليل الآلي الصيدلاني ومختبر الصيدلانيات.

A4	Describe analytical methods, principles, design and development techniques	a2 . Explain the analytical methods and procedures applied to evaluate the quality of pharmaceutical raw materials , in-process products and finished products.			
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacists in implementing quality control rules and in evaluating the quality of pharmaceutical products.			
Intellect	ual skills: upon completion of the course,	students will be able to:			
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret the out-coming data obtained after qualitative or quantitative analysis of raw materials , in-process products and finished pharmaceutical products			
В3	Design an evaluate different types of safe and effective drugs, pharmaceutical dosage forms and cosmetic preparations	b2. Evaluate different types of pharmaceutical dosage forms.			
B4	Select appropriate standard operation procedures to conduct qualitative and quantitative analysis.	b3 . Select suitable standard operation procedures to investigate quality of pharmaceutical raw materials , in-process products and finished products			
В9	Apply mathematical equations to calculate data relevant to pharmacy practices.	b4 Apply calculations to assess the quality of raw materials, in-process products and finished pharmaceutical products			
Professi	onal and practical skills: upon completion	of the course, students will be able to:			
C1	Handle safely the chemicals, biological samples and pharmaceutical ingredients and products.	c1. Handle efficiently and safely the chemical materials and tools used in the laboratory			
C2	Operate different instruments and use emerge technologies for preformulation, formulation and analysis of materials according to standard guidelines.	c2. Operate the instruments and perform experiments successfully in the laboratory			
Transfe	rable skills: upon completion of the course	e, students will be able to:			
D1	Interact and communicate effectively and behave in disciplines with colleagues, patients and healthcare professionals effectively in teamactivities.	d1. Communicate effectively and behave in discipline with colleagues.

teaching strategies and assessment strategies

teach	ing strategies and assessmen	t strategies
1. A	Alignment CILOs to PILOs	
PILO	s	CILOs
Knowle	dge and understanding: upon completion	of the course, students will be able to:
A3	Explain physicochemical properties of materials and products	a1. Identify the physicochemical properties of raw materials, in-process products and finished products that are used to evaluate their qualities.
A4	Describe analytical methods, principles, design and development techniques	a2 . Explain the analytical methods and procedures applied to evaluate the quality of pharmaceutical raw materials , in-process products and finished products.
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of pharmacists in implementing quality control rules and in evaluating the quality of pharmaceutical products.

Interpret the out-coming data obtained after litative or quantitative analysis of raw erials, in-process products and finished maceutical products Evaluate different types of pharmaceutical age forms.
V1 1
. Select suitable standard operation cedures to investigate quality of maceutical raw materials , in-process ducts and finished products
Apply calculations to assess the quality of materials, in-process products and finished maceutical products

V. Teaching strategies of the course:

Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Laboratory practice: students doing experiments in labs individually or in small groups

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

IX	IX. Assignments:						
No	Assignments Aligned CILOs Week Due						
1	Individual: every student is assigned to solve the problems provided by the teacher at the end of each unit	b4, d2	7

V. Teaching strategies of the course:

Active lecture: It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homeworks, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

Seminars: these are mainly used with small groups of students (20-30) students in which they find better chances for discussing and participating in the teaching process.

LI. Course Description:

This course is complementary to (clinical pharmacy I) course and both are designed to provide the students with essential knowledge and skills of Assessment of drug therapy (drug therapy monitoring DTM) necessary to select appropriate safe and effective medications for patient's cases. The course concerns in particular with drug therapy monitoring and also with clinical management and pharmacotherapy of patients having CVS, endocrinal disorders, respiratory, renal, infectious and oncologic disorders.

هذه المقرر التعليمي مكمل للمقرر السابق (الصيدلة السريرية1) وكلاهما مصمم لتزويد الطلاب بالمعرفة والمهارات الأساسية لتقييم العلاج الدوائي (مراقبة العلاج الدوائي DTM) اللازمة لاختيار الأدوية المناسبة والأمنة والفعالة لحالات المريض. يهتم المقرر الدراسي بشكل خاص بمراقبة العلاج الدوائي وكذلك بالإدارة السريرية والعلاج

III. Intended learning outcomes of the course (CILOs) and their alignment to Program Intended learning outcomes (PILOs), teaching strategies and assessment strategies

teaching strategies and assessment strategies					
66.	Alignment CILOs to PILOs				
PILO	s	CILOs			
Knowle	dge and understanding: upon completion of	the course, students will be able to:			
A2	Explain the fundamental of social and behavioral sciences.	a1 . Explain the impact of good behavior and communication of al clinical pharmacists on their relationship with patients and other healthcare professionals			
A5	Identify actions of medicines on human body.	a2 . Identify the therapeutic uses of medicines, their adverse effects and non-pharmacotherapy measures to aid cure of diseases.			
A10	Describe the pharmacists role in different pharmacy practices.	a3. Describe the role of clinical pharmacists in rational medications use and designing therapeutic regimens for patients			
Intellect	tual skills: upon completion of the course, stu	dents will be able to:			
B1	Collect interpret and assess information and data relevant to pharmacy practice	b1. Interpret clinical features and other disease data to properly recommend safe and effective medications for patients			
B7	B7 Formulate and evaluate patient care plan about rational drug use of medications. b2. Formulate and evaluate patient care plan about ration medication use to improve patient safety and drug efficacy				
Professi	Professional and practical skills: upon completion of the course, students will be able to:				
C4	Advice patients and healthcare professionals to optimize medicines use.	c1. Advise patient and healthcare professionals to optimize medicinal uses.			
C7	Conduct research and utilize the results in different pharmaceutical fields.	c2 . Search efficiently for information using evidence-based sources.

X. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or Concepts map: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using learning aids such as Data show projector

Feed-back learning: students are individually asked to do perform quick tests (quiz) or to do certain assignments such lab. experiments, problems solving, homework, topics summarizing or internet search. The teacher will provide them feedback correction & evaluation

Group projects: students work on a project in groups of 2 to 3 students. Important for learning by doing ,using the results in practical manner &for promoting team work skills

Assignments Seminars

At the specified time due, group(s) of students will be assigned by the teacher to present a seminar about one topic. The seminar include power point presentation followed by discussion and questions from the teacher and other students

No	Topic	Aligned CILOs	Week Due
1	CVS, endocrinal disorders	c1, c2 c3, d1, d2, d3, d4	6
2	Respiratory, renal disorders	c1, c2 c3, d1, d2, d3, d4	12

XII. Course Description:

The course provides the student with knowledge of phases of drug discovery & development of a new drug that include approaches to obtain drugs from natural or chemical sources through to rational drug design, as well as approaches to testing drug efficacy and safety in both preclinical phases (in vitro experiments and on animals) and in clinical trials (experiments on human).

يزود المقرر الطالب بالمعرفة بمراحل اكتشاف الدوآء وتطوير دواء جديد و يتضمن ذلك طرق الحصول على الدواء من المصادر الطبيعية أو الكيميائية ، بالإضافة إلى مناهج اختبار فعالية الدواء وسلامته في المراحل قبل السريرية (في المختبر و على حيوانات التجارب) وفي التجارب السريرية (على البشر).

X. Course Content:

- Each 4-7 students group is assigned to do a research (experimental or observational) directied by a supervisor of the department teaching staff or outside the faculty.
- > The topic of research can be proposed by :
 - The supervisor
 - Or the students after supervisor acceptance
- The topic must be approved by the department/faculty administration.
- Experiments are carried out in the faculty laboratories and if necessary outside the faculty
- The department and the faculty provide the students with necessary instruments and materials
- ➤ The research is to be carried out within the period of the term (i.e. 16 weeks) and must be delivered to the department within that period
- ➤ The faculty propose the name of committee members to the faculty council . The committee will discuss and judge the research as described below in the assessment schedule .

d2. Demonstrate skills of effective presentation and timemanagement.	Presentation assessment (by internal and external examiner)
d3 . Participate successfully with colleagues in team work	Participation assessment (by the supervisor)
d4 . Retrieve evidence-based references while proposing, conducting and writing the research papers.	Research methodology assessment (by internal and external examiner)

IV. **Course Content:**

- Each 4-7 students group is assigned to do a research (experimental or observational) directied by a supervisor of the department teaching staff or outside the faculty.
- The topic of research can be proposed by:
 - The supervisor
 - Or the students after supervisor acceptance
- The topic must be approved by the department/faculty administration.
- > Experiments are carried out in the faculty laboratories and if necessary outside the faculty
- > The department and the faculty provide the students with necessary instruments and materials
- The research is to be carried out within the period of the term (i.e. 16 weeks) and must be delivered to the department within that period
- The faculty propose the name of committee members to the faculty council. The committee will discuss and judge the research as described below in the assessment schedule.

V. Schedule of Assessment Tasks for Students During the Semester

Each project will be assessed by a committee of three member as follows

Items	Weight	Aligned CILOs
Project supervisor	70 %	c1, d1, d3
Internal examiner : a member of the	15 %	b1, c1, d2, d4
department teaching stuff.

XII. Teaching strategies of the course:

Active Lecture It is the most frequently employed teaching method to convey knowledge and explain theories to students in large groups (50-200) or in sessions, which consist of more than one group gathered in one classroom.

The efficiency of lecturing can be enhanced by using techniques such as **Brain-storming**: It depends on stimulation of the student's brain through a group of questions &/or **Concepts map**: which depends on sequencing of thoughts in the form of maps with horizontal or vertical relations & by using **learning aids** such as Data show projector

Feed back learning: The student(s) is assigned to present one-related topic with discussion such topic with other students

VI. Assignments (Feed back learning)
